Relative Blood:

Cardiovascular and Respiratory Systems Jerry J. Batzel, Franz Kappel, Daniel Schneditz, Hien T. Tran, 2007-09-20

Cardiovascular and Respiratory Systems Modeling Analysis and Control uses a principle based modeling approach and analysis of feedback control regulation to elucidate the physiological relationships. Models are arranged around specific questions or conditions such as exercise or sleep transition and are generally based on physiological mechanisms rather than on formal descriptions of input output behavior. The authors ask open questions relevant to medical and clinical applications and clarify underlying themes of physiological control organization. Current problems, key issues, developing trends and unresolved questions are highlighted. Researchers and graduate students in mathematical biology and biomedical engineering will find this book useful. It will also appeal to researchers in the physiological and life sciences who are interested in mathematical modeling.

Hendrickson, 1996-01-01 This book is a synopsis of up to date knowledge on the quantification of ocular blood perfusion and originates from expert lectures held at the 1995 Glaucoma Meeting in Switzerland. The second part of the publication describes the different measuring methods that are currently applied in clinical practice and in research. It has been written by a team of leading researchers with the aim of bringing their findings to the attention of those working directly with patients, in particular the ophthalmologist in the clinic or private practice.
