The Size Cue to Visually Perceived Distance Walter Charles Gogel, 1964
Space Telescope Science Institute (U.S.). Symposium, 1997-06-28 One of the hottest debates in astronomy and cosmology today concerns the value of the Hubble constant This constant is of paramount importance since it fixes the size and age of the Universe At a symposium at the Space Telescope Science Institute experts from around the world presented the latest results from a plethora of techniques for determining the Hubble constant The value has always been controversial but at this meeting experts results agreed for the first time to within about 20% Based on the meeting this book presents twenty three specially written review articles They provide a comprehensive account of the Hubble constant debate with the latest results from gravitational lensing supernovae and novae the Tully Fisher relation the Sunyaev Zeldovich effect globular clusters planetary nebulae light echoes and the Hubble Space Telescope Key Project This timely volume provides a standard reference for graduate students and researchers in astronomy and cosmology

The Construction of Cognitive Maps Juval Portugali, 2007-08-23 and processes which are exclusive to humans in their encoding, storing, decoding, and retrieving spatial knowledge for various tasks. The authors present and discuss connectionist models of cognitive maps which are based on local representation versus models which are based on distributed representation as well as connectionist models concerning language and spatial relations. As is well known, Gibson's 1979 ecological approach suggests a view on cognition which is diametrically different from the classical main stream view: perception and thus cognition is direct, immediate, and needs no internal information processing and is thus essentially an external process of interaction between an organism and its external environment. The chapter by Harry Heft introduces J.J. Gibson's ecological approach and its implication to the construction of cognitive maps in general and to the issue of wayfinding in particular. According to Heft, main stream cognitive sciences are essentially Cartesian in nature and have not as yet internalized the implications of Darwin's theory of evolution. Gibson, in his ecological approach, has tried to do exactly this. The author introduces the basic terminology of the ecological approach and relates its various notions in particular: optic flow, nested hierarchy, and affordances to navigation, and the way routes and places in the environment are learned.

Graded Finite Element Methods for Elliptic Problems in Nonsmooth Domains Hengguang Li, 2022-09-01. This book develops a class of graded finite element methods to solve singular elliptic boundary value problems in two and three dimensional domains. It provides an approachable and self-contained presentation of the topic including both the mathematical theory and numerical tools necessary to address the major challenges imposed by the singular solution. Moreover, by focusing upon second order equations with constant coefficients, it manages to derive explicit results that are accessible to the broader computation community. Although written with mathematics graduate students and researchers in mind, this book is also relevant to applied and computational mathematicians, scientists, and engineers in numerical methods who may encounter singular problems.

Neural Machines: A Defense of Non-Representationalism in Cognitive Neuroscience Matej Kohár, 2023-03-09. In this book, Matej Kohár demonstrates how the new mechanistic account of explanation can be used to support a non-representationalist view of explanations in cognitive neuroscience and therefore can bring new conceptual tools to the non-representationalist arsenal. Kohár focuses on the explanatory relevance of representational content in constitutive mechanistic explanations typical in cognitive neuroscience. The work significantly contributes to two areas of literature: 1. the debate between

representationalism and non representationalism and 2 the literature on mechanistic explanation Kohar begins with an introduction to the mechanistic theory of explanation focusing on the analysis of mechanistic constitution as the basis of explanatory relevance in constitutive mechanistic explanation He argues that any viable analysis of representational contents implies that content is not constitutively relevant to cognitive phenomena The author also addresses objections against his argument and concludes with an examination of the consequences of his account for both traditional cognitive neuroscience and non representationalist alternatives This book is of interest to readers in philosophy of mind cognitive science and neuroscience

The Oxford Handbook of Vowel Harmony Nancy A. Ritter, Harry van der Hulst, 2024-09-17 This handbook provides a detailed account of the phenomenon of vowel harmony a pattern according to which all vowels within a word must agree for some phonological property or properties Vowel harmony has been central in the development of phonological theories thanks to its cluster of remarkable properties notably its typically unbounded character and its non locality and because it forms part of the phonology of most world languages The five parts of this volume cover all aspects of vowel harmony from a range of theoretical and methodological perspectives Part I outlines the types of vowel harmony and some unusual cases before Part II explores structural issues such as vowel inventories the interaction of vowel harmony and morphological structure and locality The chapters in Part III provide an overview of the various theoretical accounts of the phenomenon as well as bringing in insights from language acquisition and psycholinguistics while Part IV focuses on the historical life cycle of vowel harmony looking at topics such as phonetic factors and the effect of language contact The final part contains 31 chapters that present data and analysis of vowel harmony across all major language families as well as several isolates constituting the broadest coverage of the phenomenon to date

The Analytic Hierarchy Process Bruce L. Golden,Edward A. Wasil,Patrick T. Harker,2012-12-06 Management science is a discipline dedicated to the development of techniques that enable decision makers to cope with the increasing complexity of our world The early burst of excitement which was spawned by the development and successful applications of linear programming to problems in both the public and private sectors has challenged researchers to develop even more sophisticated methods to deal with the complex nature of decision making Sophistication however does not always translate into more complex mathematics Professor Thomas L Saaty was working for the U S Defense Department and for the U S Department of State in the late 1960s and early 1970s In these positions Professor Saaty was exposed to some of the most complex decisions facing the world arms control the Middle East problem and the development of a transport system for a Third World country While having made major contributions to numerous areas of mathematics and the theory of operations research he soon realized that one did not need complex mathematics to come to grips with these decision problems just the right mathematics Thus Professor Saaty set out to develop a mathematically based technique for analyzing complex situations which was sophisticated in its simplicity This technique became known as the Analytic Hierarchy Process AHP and has become very successful in helping decision makers to structure and analyze a wide range of problems **Perceiving in**
