

EXPERIMENTAL NMR RELAXATION METHODS

The basics of the theory of spin relaxation in NMR spectroscopy are presented in Chapter 5 and aspects of relaxation important for the design of particular NMR experiments are discussed in Chapters 6 and 7. This chapter describes spin relaxation experiments for characterizing dynamic properties of molecules over a range of different time scales with atomic resolution (*1*). Applications of these methods include investigations of backbone and side chain conformational dynamics of multiple functional states of proteins in order to characterize folding, stability, binding, and catalysis (*2*). The development of new experiments for probing molecular dynamic properties is an active area of investigation, and novel methods continue to be described in the literature on a regular basis. The experiments described in this chapter largely report on the local dynamics of a single spin or a pair of directly bonded spins. Relaxation interference between different stochastic Hamiltonians results from correlated dynamic processes (Sections 5.2.1 and 5.45). Development of comprehensive and sensitive methods for investigating correlated motions in proteins represents a particularly important area of current research (*3*).

The time scale of a dynamic process that can be characterized by spin relaxation methods depends directly on the magnitude of the variation in the spin Hamiltonian modulated by the dynamic process.

Street, Theodor Strelkoff, 1969 Two numerical techniques are utilized to study the motion of two dimensional finite amplitude water waves by using an electronic digital computer The non linear properties of water waves are of primary interest The first part of the work introduces the Stanford University Modified MAC SUMMAC code which is proposed as a valid tool for analyzing incompressible viscous flows with a free surface under transient conditions The method is applied to the study of the solitary wave run up on a vertical wall The results are compared with the available experimental data and give a much better prediction of the wave run up than the existing analytic theory In the second part Newton s process of successive corrections is applied to solve steady state potential flows with free surface and gravity A specific application to the analysis of solitary waves is made and all the wave characteristics are in excellent agreement with experiments Author *Materials Characterization by Thermomechanical Analysis* Alan T. Chemical Relaxation in Molecular Biology I. Pecht, R. Rigler, 2012-12-06 The development of an area of scientific research is a dynamic process with its own kinetic equations and its own physical mechanism The study of fast chemical interactions and transformations is such an area and while it is tempting to draw analogies or to speculate about the simplest model system the lack of adequately averaged observables is an annoying obstacle to such an undertaking Sciences suffering from such conditions usually avoid quantitative models be they primitive or complex Instead they prove their point by case histories Chemical relaxation kinetics started as an offspring of research in acoustics In some aqueous ionic solutions anomalous acoustic absorption had been observed A systematic study traced the cause of this absorption showing that the covered frequency range and the intensity of the absorption were related in a predictable manner to the rate at which ions can interact and form structures differing in volume from the non interacting species The step from this experimental observation and its correct non trivial explanation to the discovery that all fast chemical processes must reveal themselves quantitatively in the relaxation rate of a perturbed equilibrium state and that perturbation parameters other than sound waves can be used for its exploitation was made by MANFRED EIGEN in 1954 The foresightedness of K F *Nuclear Science Abstracts* ,1976 SIPRE Report ,1971 **Matrix Calculus** Ewald Bodewig, 1956 *The British Foundryman* ,1951 *Subject Guide to Books in Print* ,1991
