Chen,2013-11-01 While numerous advanced statistical approaches have recently been developed for quantitative trait loci
QTL mapping the methods are scattered throughout the literature Statistical Methods for QTL Mapping brings together
many recent statistical techniques that address the data complexity of QTL mapping After introducing basic genetics topics
and statistical principles the author discusses the principles of quantitative genetics general statistical issues of QTL
mapping commonly used one dimensional QTL mapping approaches and multiple interval mapping methods He then explains
how to use a feature selection approach to tackle a QTL mapping problem with dense markers The book also provides
comprehensive coverage of Bayesian models and MCMC algorithms and describes methods for multi trait QTL mapping and
eQTL mapping including meta trait methods and multivariate sequential procedures This book emphasizes the modern
statistical methodology for QTL mapping as well as the statistical issues that arise during this process It gives the necessary
biological background for statisticians without training in genetics and likewise covers statistical thinking and principles for
geneticists Written primarily for geneticists and statisticians specializing in QTL mapping the book can also be used as a
supplement in graduate courses or for self study by PhD students working on QTL mapping projects **Proceedings of the
