Intervening by the defendant: Although neither "positive" (for example, in *Miller*, punishment is less painful than without this legal barrier) nor "negative" (for example, change in future trading given a belief in market justice) are played perfectly. “Sustainable” refers to projects that will continue, not only when the first harvest comes, but also when the forest is no longer a source of income. In addition, the project must be profitable and sustainable when the forest owner has passed on the land to his or her children. For the study team, that might mean that the forest owner must have a minimum income of \$100 per month, and the forest must be profitable and sustainable when the owner is no longer alive.

Nutrition Behavior And Change:

Impact of a gender and nutrition behavioral change communication amid the COVID-19 crisis in Myanmar's Central Dry Zone Myanmar Agriculture Policy Support Activity (MAPSA),2022-04-19 Social behavior change communication SBCC interventions on gender and nutrition are now commonly implemented but their impact on diet quality and empowerment is rarely assessed rigorously We estimate the impact of a nutrition and gender SBCC intervention on women s dietary diversity and empowerment in Myanmar during an especially challenging period the first year of the COVID 19 pandemic The intervention was implemented as a cluster randomized controlled trial in 30 villages in Myanmar s Central Dry Zone Our analysis employs data from the baseline survey implemented in February 2020 and a phone survey implemented in February March 2021 and focuses on women s dietary diversity and sub indicators of the project level women s empowerment in agriculture index pro WEAI Two indicators of women s empowerment inputs to productive decisions and access to and decisions over credit improved indicating that SBCC interventions can contribute to changing gendered perceptions and behaviors however most of the empowerment indicators did not change indicating that much of gendered norms and beliefs take time to change Women s dietary diversity scores were higher by half a food group out of 10 in treatment villages More women in treatment villages consumed nuts milk meat or fish and Vitamin A rich foods daily than in control villages We show that even in the setting of a pandemic a SBCC intervention can be delivered through a range of tools including household visits phone based coaching and voice based training that are responsive to local and individual resource limitations Gender messaging can change some gendered perceptions but it may take more time to change deeply ingrained gender norms Nutrition messaging can help counter the declines in dietary quality that would be expected from negative shocks to supply chains and incomes Nutrition, Behavior, and Change Helen H.
