

Social & Behavior Change in Nutrition: What Works?

Nutrition programs are meaningful only to the degree that they help people do something differently. That is where social and behavior change (SBC) methods can help. In our experience, we have seen program planners miss opportunities to achieve much bigger and more lasting impact of their SBC work. The nine tips we offer here show you what you can do at each stage of a program cycle to avoid missing such great opportunities and to contribute to real, positive changes in people's lives.

PROJECT DESIGN

1. Plan an ongoing, iterative workflow of the ever-evolving and flexible evidence, study, or program cycle. This approach allows for continuous learning and adaptation, and the program can evolve as the evidence base grows. It is important to build in time for reflection and adaptation in response to new evidence and needs.

2. Develop a strong evidence base. Evidence is the foundation for design – and there is no one design that works for all. It is important to understand the context of the problem, the target population, and the barriers to change. The evidence base should be a mix of quantitative and qualitative data, and it should be updated regularly.

3. Address the key challenges. Address the key challenges – the barriers to change – and develop a strategy to address them. This strategy should be based on the evidence base and should be tailored to the specific context of the program. It is important to address the barriers to change in a way that is sustainable and scalable.

EVALUATION

9. Evaluate the program. Evaluate the program to see if it is working and if it is sustainable. This evaluation should be based on the evidence base and should be tailored to the specific context of the program. It is important to evaluate the program in a way that is sustainable and scalable.
