Pebbles In The Wind:

Wind, Gravel and Ice Christina Chowaniec, 2021-07-14 When Christina discovers her Grandfather's diary years after his death she is surprised to learn he had been stationed in Iceland as a young Canadian soldier in the early days of the Second World War. Intrigued she sets out on a decade long journey to unravel his story and fill in a little known piece of the Canadian war story. From the official records in the National Archives in Ottawa to the windswept plains of Iceland Christina follows the trail and crafts her Opa's story in his voice. This is the story of the ten months from July 1940 to April 1941 that her Opa spent in Iceland with the Cameron Highlanders of Ottawa building an airfield and installing machine guns to protect the island from German invasion. She vividly recreates the daily rigours of camp life experienced by her Opa, his childhood best friend and their platoon as they struggle to carry out orders as new soldiers in a strange land and to break down barriers with local Icelanders who resent the Occupation. Then on February 9 1941 a lone German Heinkel HE 111 bomber traded its bombs for extra fuel set a course for the remote and strafed an airfield 1 000 miles from the front lines of the war. This strange act one plane attacking one obscure outpost manned by her Opa's platoon is a story few will be familiar with and yet those moments changed the course of the war. [Stratigraphy of the Wind River Formation in South-central Wind River Basin, Wyoming](#) Paul E. Soister, 1968 Additional title page description A detailed study of the physical stratigraphy of the uranium bearing formation in and near the important Gas Hills uranium district of central Wyoming. *The Movement of Soil Material by the Wind* Edward Elway Free, 1911 **The Physics of Blown Sand and Desert Dunes** Ralph Bagnold, 2012-12-06 THE NATURE OF THE PROBLEM THIS book results from an attempt to explain on a basis of experimental physics some of the many strange phenomena produced by the natural movement of sand over the dry land of the Earth. The subject is but one aspect of a far wider problem which is still very imperfectly grasped the transport of solid particles of any kind by fluids in general. Here the difficulty has been and still is that no one branch of science has attempted to deal with the problem as a whole or to co-ordinate the vast amount of piecemeal work by students of different outlook in many unrelated fields. The carriage of silt by rivers has received a great deal of attention from engineers. But owing to the difficulties of direct measurement to the expense and labour of conducting full scale experiments and to a failure to find agreement as to the basic quantities upon which a theoretical edifice may be built the published results are far from satisfactory. Little has emerged except empirical formulae and these are rarely capable of reliable application to conditions other than those under which they were evolved. The drifting of snow is of direct interest to transport authorities in many countries to meteorologists engaged in the study of rainfall to ski runners and to mountaineers. Yet no means has been found whereby the precipitation can be gauged or the rate of drift related to the strength of the wind. *Wind as a Geomorphic Agent in Cold Climates* Matti Seppälä, 2004-06-17 A 2004 monograph describing wind generated polar landforms both modern day and those preserved in the geological record. *Science* John Michels (Journalist), 1907 Vols for 1911-13 contain

Dynamic Earth Eric H. Christiansen, W. Kenneth Hamblin, 2014-02-26 New technologies has given us many different ways to examine the Earth For example we can penetrate deep into the interior of our planet and effectively X ray its internal structure With this technology comes an increased awareness of how our planet is continually changing and a fresh awareness of how fragile it is Designed for the introductory Physical Geology course found in Geology Earth Science Geography or Physical Science departments Dynamic Earth An Introduction to Physical Geology clearly presents Earth s dynamic geologic systems with their many interdependent and interconnected components It provides comprehensive coverage of the two major energy systems of Earth the plate tectonic system and the hydrologic cycle The text fulfills the needs of professors by offering current content and a striking illustration package while exposing students to the global view of Earth and teaching them to view the world as geologists

Phylogensis of Beauty Pietro Gaietto, 2014-04-25 Phylogenesis of beauty by Pietro Gaietto is a scientific treatise on the origins and general evolutionary outcome of beauty from the beginning of the world to the present Beauty has never before been the object of scientific study nor has its evolution Gaietto has integrated human products including art into the general evolution of beauty in nature noting that man s object follow the same rules of evolutionary transformation found in organic and inorganic physical forms Gaietto s hypothesis on the transformation of beauty concerns all the kingdoms of nature as they have appeared in chronological order from the earliest geological ages and as discovered by geologists paleontologists and paletnologists The book s scientific analysis of beauty in human artifacts excludes questions of quality even if they exist as well as the idea of ugliness because man intentionally produces only beautiful things

Desert sedimentary environments , 2010-01-15 Desert sedimentary environments Geomorphology in Deserts Ronald U. Cooke, Andrew Warren, 2023-11-15 This book examines the landforms soils and geomorphological processes of deserts which cover over 20% of Earth s land surface Despite their vastness and the significant body of literature on the topic deserts remain underrepresented in comprehensive geomorphological surveys with notable exceptions like Walther s Das Gesetz der Wiistenbildung 1924 Cotton s Climatic Accidents in Landscape Making 1942 and Tricart and Cailleux s Le Model des R gions S ches 1961 Our study builds on these works incorporating our field experiences in deserts across North America South America North Africa and Pakistan while primarily drawing on English language research and emphasizing contemporary geomorphological systems at different scales By focusing on present processes shaping landforms and soils we have given

less attention to regional chronologies of landform development a consequence of our selective approach The field of desert geomorphology still grapples with speculative theories such as parallel slope retreat and pervasive wind erosion which often overshadow empirical evidence We aim to provide grounded generalizations clarify contested ideas and pose meaningful questions to establish a baseline for future research hoping to contribute to a deeper understanding of the dynamic processes shaping desert landscapes This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1973 **Proceedings of the Geologists' Association** Geologists' Association, 1900 Geomorphology of Desert Environments Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth s land surface experiences a desert climate and this area supports approximately 15% of the planet s population This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically It begins with an overview of global deserts proceeds through treatments of weathering hillslopes rivers piedmonts lake basins and aeolian surfaces and concludes with a discussion of the role of climatic change Written by a team of international authors all of whom are active in the field the chapters cover the spectrum of desert geomorphology
