Prospects For Sexing Mammalian Sperm:

Prospects for Sexing Mammalian Sperm Rupert P. Amann, George E. Seidel, 1982 Prospects for Sexing Mammalian Sperm Rupert P. Amann, George E. Seidel, 1982 Biomedical Ethics Reviews · 1985 James M. Humber, Robert F. Almeder, 1986-02-25 Biomedical Ethics Reviews 1985 is the third volume in a series of texts designed to review and update the literature on issues of central importance in bioethics today Four topics are discussed in the present volume 1 Should citizens of the United States be permitted to buy sell and broker human organs 2 Should sex preselection be legally proscribed 3 What decision making procedure should medical personnel employ in those cases where there is a high degree of uncertainty 4 What do we mean when we use the terms health and disease Each topic constitutes a separate section in our text introductory essays briefly summarize the contents of each section Bioethics is by its nature interdisciplinary in character Recognizing this fact the authors represented in the present volume have made every effort to minimize the use of technical jargon At the same time we believe the purpose of providing a review of the recent literature as well as of advancing bioethical discussion is admirably served by the pieces collected herein We look forward to the next volume in our series and very much hope the reader will also *Manipulation of Mammalian Development* Ralph B.L. Gwatkin, 2013-11-11 Developmental biology has been transformed recently by discoveries in the fields of molecular biology cell biology and immunology New ways of manipulating mammalian development are uncovering control mechanisms and enabling us to apply them in solving practical problems in animal production and human health This book outlines some of these new manipulations and how they have contributed to the present state of developmental biology Chapter 1 describes gene transfer by micro injection of cloned recombinant DNA into zygotes Although the factors that affect transformation frequencies and integration sites are still unknown such techniques offer a number of exciting prospects Research models for human disease could be artificially created and desirable characteristics in agricultural animals could be enhanced The theme of cell to cell transfer is continued in Chapters 2 and 3 Chapter 2 describes pronuclear transplantation by Sendai virus induced fusion of the karyoplast with the enucleated embryo Using this procedure it has been demonstrated that both male and female genomes are essential for normal development although the reason for this is not yet understood Chapter 3 describes studies on the fusion of whole oocytes **Genetics of Sex Determination** R.S. Verma, 1996-04-23 The Genetical Theory of Natural Selection by R A Fisher 1930 dictated that sexual dimorphisms may depend upon a single Mendelian factor This could be true for some species but his suggestion could not take off the ground as gender in *Drosophila* is determined by the number of X chromosomes Technical advances in molecular biology have revived the initial thinking of Fisher and dictate that TDF or SRY genes in humans or Tdy in mice are sex determining genes The fortuitous findings of XX males and XY female which are generally termed sex reversal phenomenon are quite bewildering traits that have caused much amazement concerning the pairing mechanisms of the pseudoautosomal regions of human X and Y chromosomes at meiosis These

findings have opened new avenues to explore further the genetic basis of sex determination at the single gene level. The aim of the fourth volume titled *Genetics of Sex Determination* is to reflect on the latest advances and future investigative directions encompassing 10 chapters. Commissioned several distinguished scientists, all pre-eminent authorities in each field, to shed their thoughts concisely but epitomise their chapters with an extended bibliography. Obviously, during the past 60 years, the meteoric advances are voluminous and to cover every account of genes, chromosomes and sex in a single volume format would be a herculean task. Therefore, a few specific topics are chosen which may be of great interest to scientists and clinicians. The seasoned scientists who love to inquire about the role of genes in sex determination should find the original work of these notable contributors very enlightening. This volume is intended for advanced students who want to keep abreast as well as for those who indulge in the search for genes of sex determination.

Molecular Genetics of Sex Determination Stephen S. Wachtel, 2014-07-23. In this era of accelerated discovery and prolific output, *Molecular Genetics of Sex Determination* keeps readers abreast of this field's fast-moving biology. Its chapters were completed by experts in each area only months before publication. The text is organized into two parts. First, it reviews the basic biology of sex determination and summarizes ground-breaking work in mouse, marsupial and *Drosophila* systems. Second, it covers current human genetics, clinical studies and the syndromes of abnormal sex differentiation. With chapters by pre-eminent reproductive biologists, this is a capital work. Ohno's law is described by Ohno, the Lyon hypothesis by Lyon. Sinclair tells how he cloned the testis-determining gene and so on. *Molecular Genetics of Sex Determination* is authoritative, comprehensive and current. It is prime reading for geneticists, developmental biologists, graduate students in these and related fields, clinical researchers, physicians and medical students. Reviews the genetics of sex determination in 19 up-to-date chapters. Features research on sex chromosomes and sex-determining genes. Includes abnormalities of sex determination and clinical genetics. Written by scientists who pioneered work in this field.

Manual on Assisted Reproduction Thomas Rabe, Klaus Diedrich, Benno Runnebaum, 2012-12-06. Our knowledge of reproductive medicine has expanded rapidly since the birth of Louise Brown, the first baby to be conceived by in vitro fertilization, which was performed by Professors Steptoe and Edwards in Bourn Hall, England, in 1978. Hardly a year goes by without the development of a new or the modification of an existing method of assisted reproduction. Within a relatively short period, in vitro fertilization has been introduced into the treatment of female infertility. Intracytoplasmic sperm injection has also created new opportunities for the treatment of male infertility. This manual takes stock of the techniques of assisted reproduction that are available today. Competent authors from various centers present in a concise way their tried and tested procedures so that the latter can be readily implemented. Due to different legal regulations, the scope of assisted reproduction is much more limited in Germany than in many other countries. For example, whereas only three embryos may be conceived and transferred in Germany, such restrictions do not exist in several other European countries and the United States. Further, more heterologous fertilization, oocyte donation and

surrogate motherhood are banned in Germany We are glad to have been able to recruit many international experts to present the various fields of assisted reproduction from their perspective We hope this book will help to establish the different therapies and achieve a wide distribution **Bibliographies and Literature of Agriculture** ,1978

Reproduction in Farm Animals E. S. E. Hafez,B. Hafez,2013-07-03 When you are looking for a comprehensive and reliable text on large animal reproduction look no further the seventh edition of this classic text is geared for the undergraduate student in Agricultural Sciences and Veterinary Medicine In response to reader feedback Dr Hafez has streamlined and edited the entire text to remove all repetitious and nonessential material That means you will learn more in fewer pages Plus the seventh edition is filled with features that help you grasp the concepts of reproduction in farm animals so you will perform better on exams and in practice condensed and simplified tables so they are easier to consult an easy to scan glossary at the end of the book an expanded appendix which includes graphic illustrations of assisted reproduction technology Plus you will find valuable NEW COVERAGE on all these topics Equine Reproduction expanded information reflecting today's knowledge Llamas NEW CHAPTER Micromanipulation of Gametes and In Vitro Fertilization NEW CHAPTER Reach for the text that is revised with the undergraduate in mind the seventh edition of Hafez's Reproduction in Farm Animals *Beef Cattle Science Handbook, Vol. 20* Frank H. Baker,2019-03-01 The 1984 International Stockmen's School Handbooks include more than 200 technical papers presented at this year's Stockmen's School sponsored by Winrock International The authors of these papers are outstanding animal scientists agribusiness leaders and livestock producers who are expert in animal technology animal management and gene **Cell Separation** Thomas G. Pretlow,Theresa P. Pretlow,2014-05-10 Cell Separation Methods and Selected Applications Volume 2 provides information pertinent to the design and application of methods for the separation of cells This book covers a variety of topics including thyroid structure and function procurement of eosinophils elutriation stromal cells isolation of epithelial cells and separation of cells Organized into 15 chapters this volume begins with an overview of the structure of thyroid parenchyma and the properties of endocrine parafollicular cells This text then summarizes the various aspects of the separation methodology to assist investigators with the use of elutriation Other chapters describe the methods that are useful for the separation of stromal cells from tumors This book discusses as well the types of methods that are available for the purification of cells from tumors The final chapter deals with the biological significance of the erythroblastic nest This book is a valuable resource for cell biologists experimental oncologists hematologists immunologists and endocrinologists **Man-Made Women** Gena Corea,Renate Duelli Klein,Jalna Hanmer,Helen B. Holmes,Betty Hoskins,Madhu Kishwar,Janice Raymond,Robyn Rowland,Roberta Steinbacher,2024-11-20 In the early 1980s the new reproductive technologies available supposedly offered infertile women a chance to have children However there was growing concern that the determination of scientists to dominate nature their disregard for women's well being and the financial gains to be made from these technologies would together result in the

increased modification of all women's lives and the loss of even more control over our own bodies Originally published in 1985 the essays in *Man Made Women* describe the technologies being used and researched in the areas of in vitro fertilization test tube babies sex predetermination and embryo transfer at the time They discuss the practical application of the technologies on an international scale and draw attention to the racist and classist assumptions on which they are based There is also information about the international action that feminists had begun to counter these so called benevolent and therapeutic technologies *Man Made Women* hoped to encourage women to start questioning the miracle of these new reproductive technologies and to become involved in crucial decisions about their bodies and their lives Potential

Subcommittee on Investigations and Oversight, 1982 **Ethics in Reproductive Medicine** David R. Bromham, Maureen E. Dalton, Jennifer C. Jackson, Peter J.R. Millican, 2012-12-06 Medical ethics is a difficult and controversial field and that part of it dealing with reproductive medicine is no exception Our first conference on philosophical ethics in reproductive medicine PERM 1 in 1988 discussed many of the controversies in this field The acclaim it received encouraged us to organise PERM 2 but choosing a relevant and topical programme was a clairvoyant challenge in its own right Since PERM 1 we have seen a number of developments in the UK and internationally that have thrown the problems that society must face into sharp relief Drawing on the expertise of contributors from science many medical specialities philosophy theology and economics we have sought to address the issues raised by these new developments as well as a number of long standing issues that remain as contentious as ever but of undiminished significance On the scientific front the long predicted technique of embryo biopsy and diagnosis is now a reality This has prompted the inclusion of some of the topics addressed by this second conference *Genetic Manipulation* Werner Arber (Microbiologist), 1984-03 Twenty three papers by the Committee on Genetic Experimentation COGENE review recent advances in experimental studies on microorganisms plants and animals **Biology of Spermatogenesis and Spermatozoa in Mammals** Sardul S.

Guraya, 2012-12-06 **Animal production and animal science worldwide** A. Rosati, A. Tewolde, C. Mosconi, 2023-08-28 After the experience of the first volume The World Association for Animal Production WAAP continues the publication of the Book of the Year series for the benefit of animal scientists and policy makers in the field of livestock systems The WAAP asked the best known and significant animal scientists in the world to contribute to the preparation of this book Following the success of the first volume of the series the WAAP Book of the Year 2003 many authors from the six continents are contributing to this 2nd volume The importance of this publication is to have already established a worldwide reference for the animal science and production sectors There are the usual four sections that raised much interest in the previous volume of the series The first section has six articles describing the changing conditions of livestock systems in each of the six continents The second section has more than twenty papers describing the development of the many sectors in which the

animal science field has been divided The third section dealing with contemporary issues is declared by our readers to be the most interesting It allows participating authors to describe current and significant issues important in these last years for the animal science and production sectors The statistics produced in the previous volume are updated and enhanced with new figures in this book to form the fourth section The papers included in this book speak clearly of the development in the last twelve months in the livestock systems worldwide Major space is also devoted to the list of references from where every author can start to deepen his knowledge This book is essential for libraries that want their readers to be easily updated Also scientists policy makers and scientific writers who need to enhance their competence to have the most practical way of knowing what is going on in the world in the field of livestock science and production will find this book of great value
