Protein Targeting A Practical Approach:

Protein Targeting Anthony I. Magee, Thomas Wileman, 1992

Protein Targeting Protocols Roger A.

Clegg, 2008-02-04 It is by no means a revelation that proteins are not uniformly distributed throughout the cell. As a result the idea that protein molecules because of the specificity with which they can engage in interactions with other proteins may be aimed via these interactions at a restricted target is a fundamental one in contemporary molecular life sciences. The target may be variously conceived as a specific molecule, a group of molecules, a structure or a more generic type of intracellular environment. Because the concept of protein targeting is intuitive rather than explicitly defined it has been variously used by different groups of researchers in cell biology, biochemistry and molecular biology. For those working in the field of intracellular signaling an influential introduction to the topic was the seminal article by Hubbard Cohen TIBS 1993 18 172 177 which was based on the work of Cohen's laboratory on protein phosphatases. Subsequently the ideas that they discussed have been further developed and extended by many workers to other key intermediaries in intracellular signaling including protein kinases and a great variety of modulator and adaptor proteins.

A Practical Guide to Membrane Protein Purification Gebhard von Jagow, 2013-10-22 A Practical Guide to Membrane Protein Purification is written especially for researchers who have some familiarity with separation of water soluble proteins but who may not be aware of the pitfalls they face with membrane proteins. This guide presents techniques in a concise form emphasizing the aspects unique to membrane proteins. The book explains the principles of the methods permitting researchers and students new to this area to adapt these techniques to their particular needs. The second volume in the series this book is an essential manual for investigations of structure and function of native membrane proteins as well as for purification of these proteins for immunization and protein sequencing.

Separation, Detection and Characterization of Biological Macromolecules is a new series of laboratory guides. Each volume focuses on a topic of central interest to scientists and students in biomedical and biological research. Introductory chapters are followed by clear step by step protocols that present principles and practice. These concise manuals are designed for optimal understanding of methods as well as for practical benchtop use. Provides general guidelines and strategies for isolation of membrane proteins. Describes detailed practical procedures that have been the widest applications and lowest specialized equipment needs. Gives special emphasis to new native and denaturing electrophoresis techniques. Explains modifications of techniques used for water soluble proteins.

A Practical Guide to Drug Development in Academia Daria Mochly-Rosen, Kevin Grimes, 2023-11-06 A lot of hard won knowledge is laid out here in a brief but informative way. Every topic is well referenced with citations from both the primary literature and relevant resources from the internet. Review of first edition from Nature Chemical Biology. Written by the founders of the SPARK program at Stanford University this book is a practical guide designed for professors, students and clinicians at academic research institutions who are interested in learning more about the drug development process and how to start transforming their basic research.

discoveries into novel drugs Often many potentially transformative basic science discoveries are not pursued because they are deemed too early to attract industry interest This comprehensive book lays out simple relatively cost effective things that academic researchers can do to advance their findings to the point that they can be tested in the clinic or attract more industry interest Each chapter broadly discusses an important topic in drug development from discovery optimization and preclinical studies through clinical trial design regulatory issues and marketing assessments After the practical overview provided here the reader is encouraged to consult more detailed texts on specific topics of interest The SPARK model has been adopted in over 60 institutions on six continents and the program has been honored with multiple awards including the 2020 Xconomy Award for Ecosystem Development the 2020 Cures Within Reach Award for Patient Impact Research and the 2022 California Life Sciences Pantheon Award for Academia Non Profits Research The new edition updates every chapter with the latest developments since the 2014 publication of the first edition Bioconjugation Protocols Christof M. Niemeyer, 2008-02-04 There are a number of outstanding volumes that provide a comprehensive overview of bioconjugation techniques However many of the conventional approaches to the synthesis of chemically modified protein conjugates lack efficient means to control the stoichiometry of conjugation as well as the specific site of attachment of the conjugated moiety Moreover the recent developments in microarray technologies as well as in nanobiotechnology a novel field of research rapidly evolving at the crossroads of physics chemistry technology and materials science call for a summary of modern bioconjugation strategies to overcome the limitations of the classical approaches Bioconjugation Protocols Methods and Strategies is intended to provide an update of many of the classic techniques and also to introduce and summarize newer approaches that go beyond the pure biomedical applications of bioconjugation The purpose of Bioconjugation Protocols Methods and Strategies is therefore to provide instruction and inspiration for all those scientists confronting the challenges of semisynthesizing functional biomolecular reagents for a wide variety of applications ranging from novel biomedical diagnostics to therapeutics to biomaterials Part I contains seven protocols for the preparation of protein conjugates

Wirtz, Lester Packer, J.Å. Gustafsson, A.E. Evangelopoulos, J.P. Changeux, 2012-12-06 A NATO Advanced Study Institute on New Developments in Lipid Protein Interactions and Receptor Function was held on the Island of Spetsai Greece from August 16-27 1992. This Institute was organized to bring together researchers in the field of membrane organization and dynamics with those actively involved in studies on receptor function, signal transduction mechanisms and gene regulation. Presentations and discussions focussed on the regulation of intracellular Ca levels on the second messengers derived from inositol lipids and on the specific phospholipase C isozymes involved in these processes. A major focus was on G proteins and the effect of lipid anchors on their function. These principles of regulation were further discussed in the context of receptors for acetylcholine, lysophosphatidic acid and low density lipoproteins. In addition, various aspects of the genomic regulation of cell growth and differentiation by transcription factors were presented. These topics were put into perspective by discussing the most recent developments in lipid-protein interactions, protein insertion into membranes, membrane lipid organization and lipid dynamics as mediated by phospholipid transfer proteins. This book presents the content of the major lectures and a selection of the most relevant of the most important topics posters. These proceedings offer a comprehensive account presented during the course of the Institute. The book is intended to make these proceedings accessible to a large audience.
