Protein-lipid Interactions New Approaches And Emerging Concepts:

Protein-Lipid Interactions C.Reyes Mateo,Javier Gómez,José Villalaín,José Manuel González Ros,2008-09-30 Biological membranes have long been identified as key elements in a wide variety of cellular processes including cell defense communication photosynthesis signal transduction and motility thus they emerge as primary targets in both basic and applied research This book brings together in a single volume the most recent views of experts in the area of protein lipid interactions providing an overview of the advances that have been achieved in the field in recent years from very basic aspects to specialized technological applications Topics include the application of X ray and neutron diffraction infrared and fluorescence spectroscopy and high resolution NMR to the understanding of the specific interactions between lipids and proteins within biological membranes their structural relationships and the implications for the biological functions that they mediate Also covered in this volume are the insertion of proteins and peptides into the membrane and the concomitant formation of definite lipid domains within the membrane

Nuclear Magnetic Resonance G A Webb,2009-10-16 As a spectroscopic method nuclear magnetic resonance NMR has seen spectacular growth over the past two decades both as a technique and in its applications Today the applications of NMR span a wide range of scientific disciplines from physics to biology to medicine Each volume of Nuclear Magnetic Resonance comprises a combination of annual and biennial reports which together provide comprehensive coverage of the literature on this topic This Specialist Periodical Report reflects the growing volume of published work involving NMR techniques and applications in particular NMR of natural macromolecules which is covered in two reports NMR of Proteins and Nucleic Acids and NMR of Carbohydrates Lipids and Membranes For those wanting to become rapidly acquainted with specific areas of NMR this title provides unrivalled scope of coverage Seasoned practitioners of NMR will find this an invaluable source of current methods and applications

Life at the Nanoscale Yves Dufrene,2019-03-28 Proceeding from basic fundamentals to applications this volume provides a comprehensive overview of the use of AFM and related scanning probe microscopies for cell surface analysis It covers all cell types from viruses and protoplasts to bacteria and animal cells It also discusses a range of advanced AFM modalities including high resolution imaging nanoindentation measurements recognition imaging and single molecule and single cell force spectroscopy The book covers methodologies for preparing and analyzing cells and membranes of all kinds and highlights recent examples to illustrate the power of AFM techniques in life sciences and nanomedicine

Molecular Manipulation with Atomic Force Microscopy Anne-Sophie Duwez,Nicolas Willet,2011-12-07 With the invention of scanning probe techniques in the early 1980s scientists can now play with single atoms single molecules and even single bonds Force dynamics and function can now be probed at the single molecule level Molecular Manipulation with Atomic Force Microscopy AFM presents a series of topics that discuss concepts and methodol

Biochemical Techniques for Analyzing Protein-Lipid Interactions Ayyub Patel,2024-11-18 The book reviews cutting edge advancements and their implications

across various domains of molecular diagnostics It covers foundational topics like protein ligand interactions lipid protein interactions within biological membranes and the application of NMR spectroscopy in understanding membrane structures The book also explores advanced techniques such as X ray crystallography liposome microarray assays and protein lipid interaction studies By integrating experimental and computational methods it provides a comprehensive guide to understanding the complexities of molecular diagnostics from basic principles to innovative approaches in drug discovery and therapeutic development Each chapter offers detailed discussions on specific topics supported by experimental data and methodological insights making it an invaluable resource for researchers clinicians and students seeking to enhance their knowledge and expertise in molecular diagnostics

Guest,2020-04-17 Aging is an inevitable part of life and is becoming a worldwide social economic and health problem This is mainly due to the fact that the increasing proportion of individuals in the advanced age category have a higher probability of developing age related disorders such as

type II diabetes mellitus cardiovascular disorders sarcopenia and neurodegenerative conditions New therapeutic approaches are still needed to decrease or slow the effects of such diseases Advances in omic technologies such as genomics transcriptomics proteomics and metabolomics have significantly advanced our understanding of disease in multiple medical areas as the analysis of multiple molecular networks has simultaneously provided a more integrated view of disease pathways It is hoped that emerging hits from these analyses might be prioritized for further screening as potential novel drug targets for increasing the human healthspan in line with the lifespan In turn this will lead to new therapeutic strategies as well as drug development projects by the pharmaceutical industry This book presents a series of reviews describing studies that have resulted in identification of new potential drug targets for age related disorders Much of this information has come from omic comparisons of healthy and disease states or from testing the effects of new therapeutic approaches Authored by experts from around the globe each chapter is presented in the context of specific chronic diseases or therapeutic strategies This book is designed for researchers in the areas of aging and chronic disease as well as clinical scientists physicians and stakeholders in major drug companies
