Protocol Specification Testing And Verification V:

Protocol Specification, Testing and Verification XV Piotr Dembinski, Marek Sredniawa, 2016-01-09 This volume presents the latest research worldwide on communications protocols emphasizing specification and compliance testing It presents the complete proceedings of the fifteenth meeting on Protocol Specification Testing and Verification arranged by the International Federation for Information Processing *Protocol Specification, Testing and Verification, XII* R.J. Linn, M.Ü. Uyar, 2016-09-20 For more than a decade researchers and engineers have been addressing the problem of the application of formal description techniques to protocol specification implementation testing and verification This book identifies the many successes that have been achieved within the industrial framework and the difficulties encountered in applying theoretical methods to practical situations Issues discussed include testing and certification verification validation environments and automated tools formal specifications protocol conversion implementation specification languages and models Consideration is also given to the concerns surrounding education available to students and the need to upgrade and develop this through sponsorship of a study of an appropriate curriculum at both undergraduate and graduate levels It is hoped this publication will stimulate such support and inspire further research in this important arena **Protocol Specification, Testing, and Verification, V** Michel Diaz, 1986 **Formal Description Techniques and Protocol Specification, Testing and Verification** Stan Budkowski, Ana Cavalli, Elie Najm, 2013-04-17 Formal Description Techniques and Protocol Specification Testing and Verification addresses formal description techniques FDTs applicable to distributed systems and communication protocols It aims to present the state of the art in theory application tools and industrialization of FDTs Among the important features presented are FDT based system and protocol engineering FDT application to distributed systems Protocol engineering Practical experience and case studies Formal Description Techniques and Protocol Specification Testing and Verification comprises the proceedings of the Joint International Conference on Formal Description Techniques for Distributed Systems and Communication Protocols and Protocol Specification Testing and Verification sponsored by the International Federation for Information Processing held in November 1998 Paris France Formal Description Techniques and Protocol Specification Testing and Verification is suitable as a secondary text for a graduate level course on Distributed Systems or Communications and as a reference for researchers and practitioners in industry *Protocol Specification, Testing, and Verification, VII* IFIP Working Group 6.1, 1987 *Protocol Specification, Testing and Verification XIV* S.T. Vuong, Samuel T. Chanson, 2013-11-11 This PSTV 94 Symposium is the fourteenth of a series of annual meetings organized under the auspices of IFIP W G 6 1 a Working Group dedicated to Architectures and Protocols for Computer Networks This is the oldest and most established symposium in the emerging field of protocol engineering which has spawn many international conferences including FORTE International Conference on Formal Description Tech niques IWPTS International Workshop on Protocol Test Systems ICNP Interna tional Conference on Network Protocols and CAY Conference on Computer

Aided Verification The main objective of this PSTV symposium is to provide a forum for researchers and practitioners in industry and academia interested in advances in using formal methods and methodologies to specify develop test and verify communication protocols and distributed systems This year s PSTV symposium enjoys a nice mixture of formal methods and practical issues in network protocols through the invited addresses of three outstanding speakers Ed Brinksma University of Twente Raj Jain Ohio State University and David Tennenhouse MIT as well as 5 tutorials in addition to 9 technical sessions and two practical panel sessions The 5 tutorials are offered on the first day in two parallel tracks for intensive exposure on hot topics of current interest This year out of 51 submissions the Program Committee selected 18 regular papers with an allotment of 16 pages in the Proceedings and 9 mini papers of 8 pages

Communication Protocol Specification and Verification Richard Lai, Ajin Jirachiefpattana, 2012-12-06 Communication protocols are rules whereby meaningful communication can be exchanged between different communicating entities In general they are complex and difficult to design and implement Specifications of communication protocols written in a natural language e g English can be unclear or ambiguous and may be subject to different interpretations As a result independent implementations of the same protocol may be incompatible In addition the complexity of protocols make them very hard to analyze in an informal way There is therefore a need for precise and unambiguous specification using some formal languages Many protocol implementations used in the field have almost suffered from failures such as deadlocks When the conditions in which the protocols work correctly have been changed there has been no general method available for determining how they will work under the new conditions It is necessary for protocol designers to have techniques and tools to detect errors in the early phase of design because the later in the process that a fault is discovered the greater the cost of rectifying it Protocol verification is a process of checking whether the interactions of protocol entities according to the protocol specification do indeed satisfy certain properties or conditions which may be either general e g absence of deadlock or specific to the particular protocol system directly derived from the specification In the 80s an ISO International Organization for Standardization working group began a programme of work to develop formal languages which were suitable for Open Systems Interconnection OSI This group called such languages Formal Description Techniques FDTs Some of the objectives of ISO in developing FDTs were enabling unambiguous clear and precise descriptions of OSI protocol standards to be written and allowing such specifications to be verified for correctness There are two FDTs standardized by ISO LOTOS and Estelle Communication Protocol Specification and Verification is written to address the two issues discussed above the needs to specify a protocol using an FDT and to verify its correctness in order to uncover specification errors in the early stage of a protocol development process The readership primarily consists of advanced undergraduate students postgraduate students communication software developers telecommunication engineers EDP managers researchers and software engineers It is intended as an advanced undergraduate or postgraduate textbook and a reference for communication protocol professionals
