Reading The Rocks A Biography Of Ancient Alberta:

Reading the Rocks Monique Keiran, Royal Tyrrell Museum of Palaeontology, 2003 Paleontologists and geologists read rocks as if they were stories in a book each kind of rock forms in a specific environment each represents a chapter in the geological history of a region Albertans now live in the Holocene Epoch the most recent chapter in the Quaternary Period It is a chapter still being written During this fragment of Earth's history human time intersects with the long slow pace of geological time and Albertans dependence on what has gone before becomes clear Book jacket *Deep Alberta* John Acorn, 2007-02-07 Alberta is well known for its fossil treasures and author John Acorn is as keen on the long dead creatures of Alberta as he is on the living Here John features 80 of the most noteworthy fossils fossil locations and fossil hunters from this most palaeontological of provinces There's more to the story of deep Alberta than dinosaurs but dinosaur fans will find all their favourite beasts here as well from Edmontosaurus to Tyrannosaurus rex and everything in between Then there are the surprises such as the world's oldest pike the discovery of a venomous mammal and the fossils found in such unlikely places as Edmonton and Calgary Prepared with the collaboration of palaeontologists around Alberta and the world renowned Royal Tyrrell Museum this is a book that is long overdue and that deserves a place on everyone's bookshelf *Canadian Books in Print. Amazon.com **Reading the Archive of Earth's Oxygenation** Victor Melezhik, Anthony R. Prave, Eero J. Hanski, Anthony E. Fallick, Aivo Lepland, Lee R. Kump, Harald Strauss, 2012-09-26. Earth's present day environments are the outcome of a 4.5 billion year period of evolution reflecting the interaction of global scale geological and biological processes. Punctuating that evolution were several extraordinary events and episodes that perturbed the entire Earth system and led to the creation of new environmental conditions, sometimes even to fundamental changes in how planet Earth operated. Volume 3: Global Events and the Fennoscandian Arctic. Russia Drilling Earth Project represents another kind of illustrated journey through the early Palaeoproterozoic provided by syntheses, reviews and summaries of the current state of our understanding of a series of global events that resulted in a fundamental change of the Earth System from an anoxic to an oxic state. The book discusses traces of life, possible causes for the Huronian age glaciations, addresses radical changes in carbon, sulphur and phosphorus cycles during the Palaeoproterozoic and provides a comprehensive description and a rich photo documentation of the early Palaeoproterozoic supergiant petrified oil field. Terrestrial environments are characterised through a critical review of available data on weathered and calichified surfaces and travertine deposits. Potential implementation of Ca, Mg, Sr, Fe, Mo, U and Re, Os isotope systems for deciphering Palaeoproterozoic seawater chemistry and a change in the redox state of water and sedimentary columns are discussed. The volume considers in detail the definition of the oxic atmosphere, possible causes for the oxygen rise and considers the oxidation of terrestrial environment not as a single event but a slow motion process lasting over hundreds of millions of years. Finally, the book provides a roadmap as to how the FAR DEEP cores may facilitate future interesting science and provide a new foundation for education in earth science community. Welcome to the illustrative journey through one of the most exciting periods of planet Earth. *Archaeology in America* Linda S. Cordell, Kent Lightfoot, Francis McManamon, George Milner, 2008-12-30.
