

REFERENCE GROUP (SOCIOLOGY)

A reference group is a group of people whose norms influence a person's behaviors. We use the group as a 'frame of reference' to make behavioral decisions.

DEFINITION

The concept of reference groups gives us a lens through which we can understand how group norms influence our behaviors. It demonstrates that we tend to want emulate the behaviors of the groups we identify with or aspire toward (our 'in groups'), and avoid behaviors of the groups with which we do not identify (our 'out groups').

EXAMPLES

- **Membership Reference Groups:** Groups with which we feel affiliation, so we try to uphold their norms and behaviors.
- **Aspirational Reference Groups:** Groups we aspire to be part of, so we emulate their behaviors and norms.
- **Dissociative Reference Groups:** Groups a person wants to ensure they are not associated with.

articles also permits a comparison of British American and Canadian sociology By contrasting on how researchers use theories Dr Menzies is able to reassess several theories For instance symbolic interactionist research uses embedded causal claims and stands in a dialectical relationship to other sociological research while the research version of conflict theory depends on external causes to explain social change The implications of using statistical techniques like factor analysis and regression are also considered in relation to the form of explanation

Modelling and Empirical Evaluation of Labour Supply Behaviour Isolde Woittiez,2012-12-06 One of the major issues of policy makers in The Netherlands is to reduce the high unemployment rate In 1988 economic growth was substantial in all OECD countries which led to an increase in employment The economic growth also induced extra labour supply especially of married women which altogether led to a smaller reduction in the unemployment rate than could have been expected in view of the economic growth see Rapportage Arbeidsmarkt 1989 The estimated official unemployment rate in 1988 is still 11.0% of the total labour force Therefore there is a strong interest in policies that seek to increase employment the demand side of the labour market as well as in understanding the factors that influence labour supply In this thesis we try to further such understanding by constructing a detailed model of household labour supply The data we use relate to Dutch households in 1985 In that year the official rate of unemployment was 15.9% A distinguishing feature of Dutch labour supply is its very low level of female labour force participation e.g. in 1985 it was only 35.2% Apart from Spain which had a similar participation rate most other industrialized OECD countries had a participation rate of around 60% see OECD Labor Force Statistics
