Regenerating Agriculture Policies And Practice For Sustainability And Self Reliance:

Regenerating Agriculture Jules N. Pretty, 1995 The author looks at the challenge facing agriculture today and details the concepts and characteristics of alternative sustainable agricultural practices Empirical evidence from a diverse range of agro ecological and community setting show the impact of more sustainable practices In addition existing policy frameworks and institutional processes are considered and alternatives which are known to work are presented Regenerating Agriculture Jules N. Pretty, 1995-05-17 It is becoming increasingly clear that a more sustainable agriculture can bring economic environmental and social benefits to farmers communities and nations Regenerating Agriculture draws together for the first time new empirical evidence from a diverse range of agroecological and community settings to show the impacts of more sustainable practices Twenty cases involving widespread success from Brazil Burkina Faso Honduras India Indonesia Kenya Lesotho Mali Mexico Peru Philippines and Sri Lanka are presented and are supported by field and community level data from more than 50 projects and programs in 28 countries Despite this emerging evidence many farmers still depend on high levels of external inputs Regenerating Agriculture identifies the common elements of successful programs and shows how those still using modernist approaches to agriculture can successfully turn to sustainable farming The first chapter outlines the scale of the challenge and includes analysis of sustainable agriculture s characteristics and underlying philosophies and values Pretty then presents analyses of the processes of agricultural modernization focusing on both production and conservation oriented programs and policies and the common elements of success Almost all of these successes have been achieved despite existing biased policy environments that strongly favor modern approaches to agricultural development and at the same time discriminate against sustainability Regenerating Agriculture examines policy frameworks and institutional processes then sets out 25 effective policies that are known to work to support the transition to greater sustainability and self reliance in agriculture **Regenerating Agriculture** Jules N. Pretty, 1994 **Regenerating Agriculture** Jules N Pretty, 1998 **Ecological Complexity and Agroecology** John Vandermeer, Ivette Perfecto, 2017-10-24 This text reflects the immense current growth in interest in agroecology and changing approaches to it While it is acknowledged that the science of ecology should be the basis of agroecological planning many analysts have out of date ideas about contemporary ecology Ecology has come a long way since the old days of the balance of nature and other romantic notions of how ecological systems function In this context the new science of complexity has become extremely important in the modern science of ecology The problem is that it tends to be too mathematical and technical and thus off putting for the average student of agroecology especially those new to the subject Therefore this book seeks to present ideas about ecological complexity with a minimum of formal mathematics The book s organization consists of an introductory chapter and a second chapter providing some of the background to basic ecological topics as they are relevant to agroecosystems e g soil biology and pest control The core of the book consists of seven chapters on key intersecting themes

of ecological complexity including issues such as spatial patterns network theory and tipping points illustrated by examples from agroecology and agricultural systems from around the world

Sustainable Agriculture and Food Security in an Era of Oil Scarcity Julia Wright, 2012-05-16 When other nations are forced to rethink their agricultural and food security strategies in light of the post peak oil debate they only have one living example to draw from that of Cuba in the 1990s Based on the first and up till now only systematic and empirical study to come out of Cuba on this topic this book examines how the nation successfully headed off its own food crisis after the dissolution of the Soviet Bloc in the early 1990s The author identifies the policies and practices required for such an achievement under conditions of petroleum scarcity and in doing so challenges the mainstream globalized and privatized food systems and food security strategies being driven through in both industrialized and more vulnerable developing regions Paradoxically the book dispels

the myth that Cuba turned to organic farming nationwide a myth founded on the success of Cuba's urban organic production systems which visitors to the country are most commonly exposed to In rural regions where the author had unique access industrialized high input and integrated agriculture is aspired to for the majority of domestic production despite the ongoing fluctuations in availability of agrochemicals and fuel By identifying the challenges faced by Cuban institutions and individuals in de-industrializing their food and farming systems this book provides crucial learning material for the current fledgling attempts at developing energy descent plans and at mainstreaming more organic food systems in industrialized nations It also informs international policy on sustainable agriculture and food security for less industrialized countries
