

THE FASTEST- AND SLOWEST-GROWING METROPOLITAN AREAS IN THE U.S.

This map shows the United States' 25 fastest and 25 slowest major metropolitan areas by population growth since 2010. Each area is marked with its location, name, and percentage of change in population.

Metropolitan areas contain multiple cities, but for the sake of readability, this map labels only the principal city. An area's percentage of change is measured by the difference from its census-reported population in 2010 to its estimated population during 2017. Metropolitan areas with fewer than 300,000 residents are excluded from this map.

Regional and Metropolitan Growth and Decline in the US William H. Frey, Alden, Jr. Speare, 1988-10-18 During the 1970s several striking population shifts attracted widespread attention and colorful journalistic labels Urban gentrification the rural renaissance the rise of the Sunbelt these phenomena signaled major reversals in long term patterns of population distribution In *Regional and Metropolitan Growth and Decline in the United States* authors Frey and Speare place such reversals in context by examining a rich array of census data This comprehensive study describes new population distribution patterns explores their consequences and evaluates competing explanations of current trends The authors also provide an in depth look at the changing race status and household demographics of the nation s largest cities and discuss the broad societal forces precipitating such changes Frey and Speare conclude that the 1970s represented a transition decade in the history of population distribution and that patterns now emerging do not suggest a return to the past With impressive scope and detail this volume offers an unmatched picture of regional growth and decline across the United States A Volume in the Russell Sage Foundation Census Series *Regional and Metropolitan Growth and Decline in the United States* William Frey, Alden Speare (Jr), 1988-01-01 *Regional and Metropolitan Growth and Decline in the US* William H. President,1974 Includes reports by the U S Dept of Labor called 1963 Manpower requirements resources utilization and training and the U S Dept of Health Education and Welfare 1975 The Rural Richard Munton,2017-05-15 The rural has long been regarded as an important site of geographical inquiry even if our understanding of it has not always been treated as conceptually different from the urban That said rural research has pursued a number of distinct empirical agendas ranging from the operation and impacts of agribusiness to local resistance to global food supply chains to differing representations of the rural In doing so rural geographers have critically examined the relevance and significance of ideas drawn from numerous traditions including political economy ecological modernization and cultural theory amending them as appropriate in their search to understand the nature and trajectory of rural areas Up until the 1980s attention remained largely focused upon agriculture as the primary land use but increasingly new forms of rural consumption housing recreation nature conservation have taken centre stage as the primacy of local agricultures has been undermined by reduced state protection and new rural populations which have migrated out from the city More recently research has been dominated by the cultural turn with particular emphases upon society nature relations interpretations of landscape marginalised others and analyses of the relations between representation and practice In the last decade a more holistic view of the rural bringing together different aspects of the two previous themes has emerged through more politically oriented studies of rural governance concerned with the functioning of interest groups participation protest and the allocation and management of resources The volume is thus structured into three sections concerned with agriculture and food the rural and rural governance The great majority of the selected papers combine both empirical material often highly informative case studies and important conceptual arguments about change in the rural condition that can be linked to ideas being employed elsewhere in Geography and the Social Sciences more generally These critical reflections have been drawn very largely from research conducted in advanced economies which at least provide some commonality of experience allowing the transfer of ideas between what otherwise might be seen as very differing geographical contexts *Hearings, Reports and Prints of the House Committee on Public Works* United States.
