Hydrological Extremes Lars Gottschalk, 1999 *In Extremis* Jürgen Kropp, Hans-Joachim Schellnhuber, 2010-11-03 The book addresses a weakness of current methodologies used in extreme value assessment i.e. the assumption of stationarity which is not given in reality With respect to this issue a lot of new developed technologies are presented i.e. influence of trends vs internal correlations quantitative uncertainty assessments etc The book not only focuses on artificial time series data but has a close link to empirical measurements in order to make the suggested methodologies applicable for practitioners in water management and meteorology **Advances In Geosciences (A 6-volume Set) - Volume 11:**

Drought Policies: Case Studies on Mega-droughts for the High Level Experts and Leaders Panel on Water and Disasters (HELP) Jerome Delli Priscolli ,Kenzo Hiroki ,2019-11-15

This book focuses on mega droughts of the past 20 years Twelve cases from both developed and developing countries are elaborated in the book Its intention is to draw lessons from the cases of extremely severe water shortages so that countries and stakeholders can be better prepared for extreme drought events in the future Several recurrent themes emerge from the diverse case studies and descriptions of programs For example most chapters discuss the necessity to move from reactive compensatory to preventive policies This theme has implications for use of insurance in developing countries e g is insurance encouraging investments to help countries avoid disasters or is it acting mostly in a humanitarian way to

compensate for losses to help people. Several authors point to the importance of risk assessment and to developing risk based policies for drought. This raises statistical issues of how such assessments of uncertainty and risks are done and how they relate to actual occurrence of events. Most chapters call for more inter sectoral policies which integrate water resources management approaches and to the necessity of raising public awareness of droughts in times of no drought. The issue of structural versus nonstructural is clear in most cases. While often cast as either/or the message that emerges is more one of how do you integrate these approaches. Finally a few chapters bring to light how prevention is needed for national security as well as water security. In Focus a book series that showcases the latest accomplishments in water research. Each book focuses on a specialist area with papers from top experts in the field. It aims to be a vehicle for in depth understanding and inspire further conversations in the sector.

Hydrology in Practice Elizabeth M. Shaw, Keith J. Beven, Nick A. Chappell, Rob Lamb, 2017-12-21 Hydrology in Practice is an excellent and very successful introductory text for engineering hydrology students who go on to be practitioners in consultancies the Environment Agency and elsewhere. This fourth edition of Hydrology in Practice while retaining all that is excellent about its predecessor by Elizabeth M Shaw replaces the material on the Flood Studies Report with an equivalent section on the methods of the Flood Estimation Handbook and its revisions. Other completely revised sections on instrumentation and modelling reflect the many changes that have occurred over recent years. The updated text has taken advantage of the extensive practical experience of the staff of JBA Consulting who use the methods described on a day to day basis. Topical case studies further enhance the text and the way in which students at undergraduate and MSc level can relate to it. The fourth edition will also have a wider appeal outside the UK by including new material on hydrological processes which also relate to courses in geography and environmental science departments. In this respect the book draws on the expertise of Keith J Beven and Nick A Chappell who have extensive experience of field hydrological studies in a variety of different environments and have taught undergraduate hydrology courses for many years. Second and final year undergraduate and MSc students of hydrology in engineering environmental science and geography departments across the

globe as well as professionals in environmental protection agencies and consultancies will find this book invaluable It is likely to be the course text for every undergraduate MSc hydrology course in the UK and in many cases overseas too
