Wilson, 1988-08-26 For centuries scholars have studied memory its powers its potential and its variability It is only recently however that efforts have been made to find practical methods of helping people who have severe memory disorders In this relatively new and as yet undeveloped field REHABILITATION OF MEMORY offers important information and guidelines to those interested and involved in memory therapy Dr Barbara Wilson makes no hasty claims about restoration of lost memory functioning nor does she claim to retrain memory Recognizing that such unreal promises can only frustrate patients and disappoint their families she instead focuses on what specific items such patients can learn how best they can learn and how to assess the effectiveness of their learning An essential aspect of this work is that the information gained will prove useful to patients in their daily lives and will enhance their chances of coping with real life situations The approach while being well informed by theory remains a practical one with relevance to the everyday lives of people with memory disorders Influenced by the three major disciplines of cognitive psychology neuropsychology and behavioral psychology Wilson draws from each to inform her work with those who are impeded by organic memory disorders The therapy she describes is structured upon frameworks that are themselves built upon unique and ingenious combinations of theories from all three of these disciplines Using this multi discipline approach she also demonstrates how to assess memory problems for rehabilitation and produce a comprehensive plan of action Reflecting an overall concern for the individuals in treatment an essential ingredient of this approach is the implementation of rigorous research designs to evaluate the effectiveness of treatment Relevant to a variety of professions clinical psychologists educational psychologists and neuropsychologists working with the memory impaired will gain an understanding of various techniques that can be employed to help their patients Occupational and speech therapists will learn practical measures to help with their patient s specific memory problems and academic psychologists will appreciate the theoretical support that has been advanced by Dr Wilson in her search for effective treatment programs

The Assessment, Evaluation and Rehabilitation of Everyday Memory Problems Barbara A. Wilson, 2013-11-07 In the World Library of Psychologists series international experts present career long collections of what they judge to be their finest work extracts from books key articles salient research findings and their major theoretical and practical contributions This volume

Prospective Memory Matthias Kliegel,Mark A. McDaniel,Gilles O. Einstein,2007-10-16 Over the last decade the topic of prospective memory the encoding storage and delayed retrieval of intended actions has attracted much interest and this is reflected in a rapidly growing body

of literature 350 scientific articles have been published on this topic since the appearance of the first edited book in 1996 In addition to the quan **Memory** Peter P. Deyn,Evert Thiery,Rudi D'Hooge,2003 Memory in Science for Society Robert Logie,Nelson Cowan,Susan Gathercole,Randall Engle,Zhisheng Wen,2023 Memory is essential for every day life The understanding and study of memory has continued to grow over the years thanks to well controlled laboratory studies and theory development However major challenges arise when attempting to apply theories of memory function to practical problems in society A theory might be robust in explaining experimental data but fail to capture all that is important when taken out of the lab The good news is that the application of memory in science to challenges in society is rapidly expanding and Memory in Science for Society bridges that gap Inspired by the synergy between theory and application in memory research leading international researchers share their passion for combining memory in science with applications of that science to a wide range of challenges in society Chapters demonstrate how that scientific passion has addressed challenges in education life attainment second language learning remembering life events and faces of strangers future planning and decision making lifespan cognitive development and age related cognitive decline following instructions and assessment and rehabilitation of cognitive impairment following brain damage Written and edited by the leading researchers in the field the book will be an important and influential addition to the memory literature providing a new and comprehensive focus on the connection between theory and practice in memory and society Oxford Textbook of Neurorehabilitation Volker Dietz,Nick S. Ward,2020 Updated to reflect recent developments in the field Oxford Textbook of Neurorehabilitation provides an understanding of the theoretical underpinnings of the subject along with a clear perspective on making treatment decisions on an individual basis This is an indispensable book for those working with patients requiring neurorehabilitation

Memory in Everyday Life G.M. Davies,R.H. Logie,1993-08-25 The last decade has seen a major growth in research on how memory is used in everyday life This volume represents a reaction to traditional laboratory bound studies of the first half of the century which sought to identify the fundamental principles of learning and memory through the use of materials and methods totally divorced from the real world The new wave of memory research has had considerable success in charting how memory develops the role it plays in educational and social skills and the impact of memory impairment on mental life The current volume consists of authoritative reviews of this emerging area linked to comment and criticism from major researchers in the field Contrasted probably for the first time are two major styles of research in applied memory research The naturalistic approach which has sought to study memory in everyday environments using actual experiences from people s lives as the raw data from which to derive more general principles and the applied cognitive approach whereby theories and methods are developed using orthodox laboratory techniques which are then validated by applying them directly to real phenomena This is one of the few books to bring together evidence across the very wide spectrum of humdrum activity that constitutes the everyday uses of memory **Memory and Society** Lars-Goran Nilsson,Nobuo Ohta,2013-04-03 Memory and

Society explores the social factors which influence human memory and our conceptualisation of memory. It examines the relationships between memory, society and culture and considers the relevance of theories of memory to real world issues. The opening section deals with the topic of autobiographical memory. It looks at the role of the self, how the self is shaped by society but also how it is the self which encodes and constructs memories. The Reconstructive nature of episodic memory is considered and how the present acts as the basis for remembering the past with the rememberer's beliefs, desires and interpretations playing a central role. The middle section looks at the influence of the social environment on learning. It debates the relevance of the application of basic principles gained in laboratory settings to learning and memory in social settings. These principles are used to throw light on topics such as e-learning, eyewitness testimonies and optimal treatment and thinking. Moreover, these real world scenarios are themselves used to throw light on basic principles and how they can be improved. The final section looks at the social consequences and costs of memory deficits covering normal aging and pathological changes in old age, memory deficits related to dyslexia, working memory problems in everyday cognition, problems in executive functions in chronic alcoholics and Korsakoff amnesics. It also examines methods of rehabilitation for everyday life. Incorporating contributions from leading international authorities in memory research as well as new data and ideas for the direction of future research, this book will be invaluable to psychologists working in the fields of memory and society.

The Effects of Postacute Cognitive Rehabilitation on Memory Disorders Intraurally Brain-injured Patients
Stephen Rapaski, 1991

Neurological Rehabilitation Barbara A. Wilson, 2013-01-10

This chapter begins with a discussion about the common characteristics of people with memory deficits resulting from brain injury followed by a description of a typical patient referred for memory rehabilitation. We then address some general principles to help people with memory deficits. These principles include ways of improving encoding, storage and retrieval. The next section addresses more specific strategies to help people cope without a memory through environmental modifications, b) learn more efficiently particularly through errorless learning strategies and c) compensate for their problems through external memory aids. A memory aids resource center is described. The impact of memory impairment on emotions is considered. A summary of the main components of a memory rehabilitation program is provided. The overall conclusion is that rehabilitation can help people to compensate for, bypass or reduce their everyday problems and thus survive more efficiently in their own most appropriate environments.
