The Neuroscience of Human Relationships: Attachment and the Developing Social Brain (Second Edition) (Norton Series on Interpersonal Neurobiology)

Louis Cozolino, 2014-03-24 A revised edition of the best selling text on how relationships build our brains As human beings we cherish our individuality yet we know that we live in constant relationship to others and that other people play a significant part in regulating our emotional and social behavior Although this interdependence is a reality of our existence we are just beginning to understand that we have evolved as social creatures with interwoven brains and biologies The human brain itself is a social organ and to truly understand being human we must understand not only how we as whole people exist with others but how our brains themselves exist in relationship to other brains The first edition of this book tackled these important questions of interpersonal neurobiology that the brain is a social organ built through experience using poignant case examples from the author s years of clinical experience Brain drawings and elegant explanations of social neuroscience wove together emerging findings from the research literature to bring neuroscience to the stories of our lives Since the publication of the first edition in 2006 the field of social neuroscience has grown at a mind numbing pace Technical advances now provide more windows into our inner neural universe and terms like attachment empathy compassion and mindfulness have begun to appear in the scientific literature Overall there has been a deepening appreciation for the essential interdependence of brain and mind More and more parents teachers and therapists are asking how brains develop grow connect learn and heal The new edition of this book organizes this cutting edge abundant research and presents its compelling insights reflecting a host of significant developments in social neuroscience Our understanding of mirror neurons and their significance to human relationships has continued to expand and deepen and is discussed here Additionally this edition reflects the gradual shift in focus from individual brain structures to functional neural systems an important and necessary step forward A great deal of neural overlap has been discovered in brain activation when we are thinking about others and ourselves This raises many questions including how we come to know others and whether the notion of an individual self is anything more than an evolutionary strategy to support our interconnection In short we are just beginning

to see the larger implications of all neurological processes how the architecture of the brain can help us to better understand individuals and our relationships This book gives readers a deeper appreciation of how and why relationships have the power to reshape our brains throughout our life

Expectations At the beginning during the dating phase it is easy to overlook the signs of a brewing gender war You are in love and in the midst of the exiting honeymoon stage During this stage of your romance you find everything about your partner adorable sweet and charming i e ordering for you at dinner expecting you stay at home instead of working outside of the home focusing on what is happening in his her life asking you to wear a certain style of clothing so that others will not flirt with you etc As time progresses your feelings may change In other words things that you once thought were funny and cute i e expecting you to have dinner ready each night and the house clean each day demanding that you take care of the children by yourself picking out what you are going to wear each day etc becomes quite annoying Gender roles are often not completely defined until you get married but early warning signs can pop up during the dating phase
