Manual Of Vascular Surgery Volume 1 Comprehensive Manuals Of Surgical Specialties:

Manual of Vascular Surgery Edwin J. Wylie, Ronald J. Stoney, William F. Ehrenfeld, David J. Effken, 2012-12-06 Of all the developing fields of surgery few have had the impact of vascular surgery in affecting so large a section of the population by offering the potential relief of disability and the prolongation of life As would be anticipated the interest of surgeons in this evolving specialty has largely been focused upon the selection of the most appropriate operations and the development of modifications or new procedures that overcome the limitations of previous ones The literature contains numerous conflicting claims about the relative merits of various procedures and those approaching this field for the first time may understandably be confused Yet if one were to approach any single vascular surgeon at any given time he would upon request be given a firm and precise listing of preferred procedures The procedures described in this two volume publication are those that we currently favor Their selection is the result of continuing analyses of our own experience during the past 30 years All patients have been available for prolonged follow up evaluation Late failures often helped us to identify techniques that lessened the durability of an initially satisfactory operation and they became a stimulus for the development of modifications or trials with alternative operations Particular attention is directed to the manner in which knowledge of the natural history of disease influences the choice of operations

Manual of Cardiac Surgery B.J. Harlan, A. Starr, F.M. Harwin, 2012-12-06 difficult to represent it as the surgeon sees it and to understand the anatomy which is not always visible In part this was accomplished by painting on both surfaces of transparent paper to create the illusion of looking through superficial layers to the deeper structures A combination of color media including colored pencil graphite carbon pastels and transparent and opaque watercolors enabled me to convey the field with minimal loss of reality or dimension Of equal importance was the availability for every illustration of direct surgical observation surgical photographs fresh specimens and the surgical instruments The sequence of creation was first the discussion of desired illustrations then a rough sketch consultation with the surgeons finished pencil drawing another consultation and finally the color rendering These color renderings were then checked against actual surgery for accuracy in representation of tissues instrumentation tissue responses to manipulation and consistency of representation From these processes evolved a technique that facilitated the flow of information in logical sequence from one step to the next and from one procedure to another always focusing the attention of the audience toward what is pertinent and away from the extraneous

Following Open-Heart Surgery R. Becker, J. Katz, M.-J. Polonius, H. Speidel, 2012-12-06 The Surgeon as a Humanist Medicine is the most humane of the sciences and the most scientific of the humanities Cardiac surgery today provides a most natural confluence for the high technology of medicine and the humanistic values traditional in the practice of medicine The cardiac surgeon must of necessity be knowledgeable in physiology and cardiology and must also possess consummate surgical technical skill The attainment of these skills over long years of training leads many of these surgeons to believe or perceive this long struggle as an apotheosis of their position in life rather than as an education in bringing the latest scientific advances to the care of patients The problem lies not only with the cardiac surgeon it is also contributed to by the patient's perception of heart surgery heart disease and the mystery of the science and physiology involved The patient with heart disease expecting surgery may for the first time be facing the finiteness of his existence The low risk of cardiac surgery today notwithstanding the coronary surgery patient most likely a type A personality is faced with a perceived threat to his invulnerability his self image his family his independence his control of situations and his very existence Manual of Vascular Access, Organ Donation, and Transplantation A.J. Henriksen, R.L. Simmons, M.E. Finch, N.L. Ascher, J.S.

Najarian, 2012-12-06 This book is a compilation of common and uncommon surgical and ancillary techniques that we have found useful in the multiorgan transplantation program at the University of Minnesota Descriptions of these techniques are not available at a single source elsewhere Use the book as a teaching aid a source of workable techniques and as a reference for individuals with relatively little experience in a particular area of transplantation Because of the varying levels of expertise of our readers vascular access is described in exquisite detail as it is aimed at an audience of individuals who want to learn the fine points about how to prolong the function of shunts The chapter on organ preservation is aimed at the surgeon or beginning technician who must learn how to do it from scratch even the catalogue numbers of the necessary equipment are included In contrast the chapters on heart liver and pancreas transplantation while omitting fine points of suture technique concentrate on the essential principles and safeguards Individuals contemplating such transplants are presumably already schooled in the fine points of surgical technique The chapters on cadaver organ donation are perhaps the most innovative They represent our attempt to reorganize organ donation in a way that will provide the greatest usefulness of each donor as a source for multiple organs for transplantation We hope that the book will become available to centers that while not performing liver pancreas or heart transplants wish to serve as donation centers **Manual of Vascular Surgery** E. J. Wyllie, 1986 **Warren's Operation** G.P. Marzoli, S. Vesentini, 2012-12-06 I have particular pleasure in introducing this

publication by Gian Pietro Marzoli and Sergio Vesentini Years ago they enthusiastically accepted my suggestion that they should take specific interest in the clinical and surgical problem of portal hypertension and assess the proposals of surgical experience with regard to this debated physiopathological picture These thanks are all the more real because in this way the school's attention remained fixed on a subject that had already attracted it profoundly from the start with Giovanni Castiglioni and Vittorio Pettinari as heads of the school and then threatened to die away into general conformism In Italy precariousness is easily extended to the concept of school continuity In Warren's proposal 1967 of distal splenorenal anastomosis with disconnection of the spleno oesophageal from the mesenteric district I felt there was an intelligent attempt to solve all the basic problems albeit in different ways An attempt that is to say at alleviating the gastro oesophageal circulation thus avoiding haemorrhage and at ensuring that the liver would maintain the circulatory efficiency with which it was still endowed The spleen was retained but there was reason to think that by reducing blood stasis within its ambit it would be possible to manage or alleviate any hypersplenism not an absurd hypothesis if the Americans had sometimes noted in their material functional and even anatomical reversion of the splenopathy after a simple portacaval shunt
