Manual Of Macrophage Methodology:

Manual of Macrophage Methodology Herbert B. Herscowitz, 1981 Macrophages, 2000-09-14 Macrophages are an important part of the immune response and are characterized by their ability to phagocytose foreign matter. However, the difficulties involved in macrophage isolation mean they are some of the body's least explored cells. **Macrophage Methodology** describes how to isolate moderate to high yields of viable cells from a variety of specific tissue sites under both normal and pathological conditions and then goes on to give protocols for macrophage purification. The third chapter covers techniques used to identify and measure endocytic and phagocytic capabilities using immunochemistry and fluorescent analysis. Chapter four identifies the key issues relating to the study of macrophages as antigen presenting cells and has protocols for the major assays used to measure antigen processing and presentation. Also covered are the theoretical and practical issues related to the processing and presentation of intracellular pathogens for which macrophages are the major host cell. The methods described for measuring macrophage secretory products concentrate on bioassays for molecules where no ELISA is available. The next two chapters cover measuring macrophage activity in vitro and in vivo. Finally, methods are described for the analysis of gene expression in macrophages. A variety of broad techniques have been brought together in one affordable volume to make **Macrophage Methodology** an essential buy for anyone studying macrophages.

Introduction to In Vitro Cytotoxicology Frank A. Barile, 2019-06-04 First Published in 1994 **Introduction to In Vitro Cytotoxicology** examines in vitro cytotoxicology which offers new methodologies to toxicity testing. This important new discipline of modern toxicology is gaining increased acceptance as a viable alternative to traditional testing methods. The text discusses the application of in vitro cytotoxicology to toxicity testing and human risk assessment and it analyzes the advantages and limitations of the tests performed under scientific and regulatory conditions. The book also reviews the optimum utilization of certain tests for specific groups of chemicals relevant to validation programs currently in progress. This book is a useful reference tool for students, researchers and practitioners interested in academic, industrial and regulatory toxicology, environmental health, cell biology, pharmacology, dentistry or human and veterinary medicine.

The Reticuloendothelial System Herman Friedman,2012-12-06 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and bio medical scientists in general who are interested in the intricate system of cells and molecular moieties derived from these cells which constitute the RES It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology biochemistry phylogeny and ontogeny physiology and pharmacology as well as clinical areas including immunopathology cancer infectious diseases allergy and hypersensitivity It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines The treatise editors and their editorial board consisting predominantly of the editors of individual volumes are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community in general and especially by members of the American as well as European and Japanese Reticuloendothelial Societies
