The Coming Energy Revolution Jeane Manning, 1996 There is a new and exciting revolution coming It will dramatically change our landscape our environment our economy and our lives It will provide each and every one of us with a truly unique sense of independence It will mark the end of oil influenced politics and the beginning of a bright new millennium a time in which we all will have our own unlimited sources of nonpolluting energy However it will not come without a struggle as history has already shown The Coming Energy Revolution provides us with an intriguing and insightful look at the forces behind the free energy movement The Coming Energy Revolution introduces us to some of the inventors both past and present who have insisted that we are surrounded by a sea of energy that we can tap once we have learned nature s secrets Conventional science says that space is cold and still and that what energy does exist cannot be put to useful work The new energy innovators say that conventional science is wrong and that new energy research is being suppressed by a combination of scientific inertia and corporate self interest But the suppression cannot last as this book shows there are simply too many inventors who are close to new energy breakthroughs The Coming Energy Revolution examines the technologies on which these inventors are working There are magnets that can redirect the energy of space There is a gentler form of nuclear energy that can take place on a table top There is hydrogen a clean abundant fuel that can be produced wherever needed

There is a form of hydropower that does not rely on massive dams And there are other forms of new energy The Coming Energy Revolution looks at them all and at the kinds of changes that will be needed to overcome the roadblocks between our old energy present and our new energy future **Auf der Spur des Wasserrätsels** Hans Kronberger, Siegbert Lattacher, 1995-01
