Meditation Jr. Shapiro, 2017-07-12 Many claim that meditation is effective in the treatment of many ailments associated with stress and high blood pressure and in the management of pain While there are many popular books on meditation few embrace the science as well as the art of meditation In this volume Shapiro and Walsh fill this need by assembling a complete collection of scholarly articles *Meditation Classic and Contemporary Perspectives* From an academic rather than a popular vantage the volume takes the claims and counterclaims about meditation to a deeper analytical level by including studies from clinical psychology and psychiatry neuroscience psychophysiology and biochemistry Each selection is a contribution to the field either as a classic of research or by being methodologically elegant heuristically interesting or creative Original articles cover such topics as the effects of meditation in the treatment of stress hypertension and addictions the comparison of meditation with other self regulation strategies the adverse effects of meditation and meditation induced altered states of consciousness Concluding with a major bibliography of related works *Meditation* offers the reader a valuable overview of the state and possible future directions of meditation research Today in the popular media and elsewhere debate continues Is meditation an effective technique for spiritual and physical healing or is it quackery *Meditation Classic and Contemporary Perspectives* weighs in on this debate by presenting what continues to be the most complete collection of scholarly articles ever amassed on the subject of meditation

Neural Mechanisms Underlying Movement-Based Embodied Contemplative Practices Laura Schmalzl, Catherine E. Kerr, 2016-07-05 Relative to the extensive neuroscientific work on seated meditation practices far less studies have investigated the neural mechanisms underlying movement based contemplative practices such as yoga or tai chi Movement based practices have however been found to be effective for relieving the symptoms of several clinical conditions and to elicit measurable changes in physiological neural and behavioral parameters in healthy individuals An important challenge for neuroscience is therefore to advance our understanding of the neurophysiological and neurocognitive mechanisms underlying these observed effects and this Research Topic aims to make a contribution in this regard It showcases the current state of the art of investigations on movement based practices including yoga tai chi the Feldenkrais Method as well as dance Featured contributions include empirical research proposals of theoretical frameworks as well as novel perspectives on a variety of issues relevant to the field This Research Topic is the first of its kind to specifically attempt

a neurophysiological and neurocognitive characterization that spans multiple mindful movement approaches and we trust it will be of interest to basic scientists clinical researchers and contemplative practitioners alike **Psychological**

Neuropsychology and Philosophy of Mind in Process Maria Pachalska, Michel Weber, 2013-05-02 This volume celebrates the life achievements of Jason W Brown who along with Jean Piaget Heinz Werner Alexander Luria and the W rzburg school has significantly contributed to the development of a process based theory of brain mind capable of challenging the currently fashionable modularist or cybernetic approaches to understanding human thought and feeling As a paradigm Brown s microgenetic theory is thus applicable in both brain science where Brown was inspired by the pioneering work of Schilder and Pick and the philosophy of mind where the influence of Bergson Whitehead Cassirer and Merleau Ponty can be seen Essays with a range of focus as wide as Brown s expertise have been collected in such diverse areas as neuropsychology microstructure of action symptomatology neuro rehabilitation neurolinguistics locationism theoretical psychology consciousness hypnosis morphogenesis personality development psychoanalysis Buddhist psychology mysticism and philosophy of mind evolutionary epistemology emergence novelty creativity subjectivity will and action Whiteheadian process philosophy

Motivation Evelyn Satinoff, Philip Teitelbaum, 2013-11-11 Motivation addresses a central problem in psychology Why does an animal s behavior fluctuate in the face of an unaltered environment In a sense this is the opposite of the question from which work on motivation began and for which Claude Bernard invented the concept of the fixity of the internal milieu How does an animal maintain constancy in the face of a fluctuating environment Dealing with motivation has become extremely complex as new experiments phenomena and theories have extended the concept This book embodies some of the ways in which work on motivation is currently proceeding One of the major changes has been the recognition that motivation cannot be explained without an understanding of the biological rhythms and activational systems that underlie behavior Another is that ecological and evolutionary perspectives add enormously to answering the central problem of why an animal does what it does when it does The book suffers from several omissions There is no chapter on the devel

opment of motivated behavior There is none on reward systems in the brain owing to the untimely death of James Olds whose contribution would have enriched this book appreciably and to whom we dedicate it EVELYN SATINOFF PHILIP TEITELBAUM VII Contents PART I UNDERLYING ACTIVATIONAL SYSTEMS CHAPTER 1 Motivation Biological Clocks and Temporal Organization of Behavior 3 Irving Zucker Reactivity to External Stimuli 6 Reactivity to Interoceptive Stimuli 7 Sources of Biological Rhythmicity 9 Rhythm Generation 9 Rhythm Synchronization 10 Consequences of Rhythm Desynchronization 11 **Research Agendas in the Sociology of Emotions** Theodore D.
