*Plant Breeding Reviews, Volume 46*, 2023-02-01 Plant Breeding Reviews presents state of the art reviews on plant genetics and the breeding of all types of crops by both traditional means and molecular methods Many of the crops widely grown today stem from a very narrow genetic base understanding and preserving crop genetic resources is vital to the security of food systems worldwide The emphasis of the series is on methodology a fundamental understanding of crop genetics and applications to major crops

**Handbook of Turfgrass Management and Physiology** Mohammad Pessarakli, 2007-10-09 A multibillion dollar industry that has tripled in the last ten years turfgrass management plays an important role in landscaping golf courses and other sports surfaces Proper management and cultural practices are crucial for the performance of these versatile grasses creating a demand among scientists researchers and industry professionals

**Plant Breeding Reviews, Volume 18** Jules Janick, 2010-04-23 Plant Breeding Reviews is an ongoing series presenting state of the art review articles on research in plant genetics especially the breeding of commercially important crops Articles perform the valuable function of collecting comparing and contrasting the primary journal literature in order to form an overview of the topic This detailed analysis bridges the gap between the specialized researcher and the broader community of plant scientists

Genetic Improvement of Bioenergy Crops Wilfred Vermerris, 2008-08-02 Ethanol as an alternative fuel is receiving a lot of attention because it addresses concerns related to dwindling oil supplies energy independence and climate change The majority of the ethanol in the US is produced from corn starch With the US Department of Energy's target that 30% of the fuel in the US is produced from renewable resources by 2030 the anticipated demand for corn starch will quickly exceed the current production of corn This plus the concern that less grain will become available for food and feed purposes necessitates the use of other feedstocks for the production of ethanol For the very same reasons there is increasing research activity and growing interest in many other biomass crops Genetic Improvement of Bio Energy Crops focuses on the production of ethanol from lignocellulosic biomass which includes corn stover biomass from dedicated annual and perennial energy crops and trees as well as a number of important biomass crops The biomass is typically pretreated through thermochemical processing to make it more amenable to hydrolysis with cellulolytic enzymes The enzymatic hydrolysis yields monomeric sugars that can be fermented to ethanol by micro organisms While much emphasis has been placed on the optimization of thermo chemical pretreatment processes production of more

efficient hydrolytic enzymes and the development of robust microbial strains relatively little effort has been dedicated to the improvement of the biomass itself

Johnson, 2016-03-29 The basic concept of this book is to examine the use of innovative methods augmenting traditional plant breeding towards the development of new crop varieties under different environmental conditions to achieve sustainable food production This book consists of two volumes Volume 1 subtitled Breeding Biotechnology and Molecular Tools and Volume 2 subtitled Agronomic Abiotic and Biotic Stress Traits This is volume 2 which contains 18 chapters highlighting breeding strategies for specific plant traits including improved nutritional and pharmaceutical properties as well as enhanced tolerance to insects diseases drought salinity and temperature extremes expected under predicted global climate change

**Achieving sustainable turfgrass management** Prof Michael Fidanza, 2023-01-24 Reviews the impact of climate change on the increasing threat of biotic and abiotic stresses to the turfgrass industry as well as the challenge of treating diseased turf in the face of fungicide resistance Considers the development of alternative more sustainable management practices that utilise and or optimise fewer agricultural outputs such as fertilisers pesticides and fuel to power agricultural machinery Provides a selection of case studies that detail the establishment of good turfgrass management and maintenance in a variety of environments golf courses athletic fields sports pitches arid environments

**Crop Improvement for Sustainable Agriculture** Mitchell Brett Callaway, Charles A. Francis, 1993-01-01 Crop improvement for future farming systems History of crop improvement in sustainable agriculture Choosing germplasm for breeding program success The role of seed companies in crop improvement Crop breeding objectives and methods Breeding for resistance to insects and plant pathogens Crop tolerance to weeds Tree improvement for agroforestry systems Contributions of biotechnology to crop improvement Genotype by environment interaction in crop improvement Statistical design and analysis of intercropping experiments

**Principles of Cultivar Development V.2** Walter R. Fehr, 1987

**Adaptation in Plant Breeding** P.M.A Tigerstedt, 2013-03-09 Plant adaptation is a fundamental process in plant breeding It was the first criterion in the initial domestication of plants thousands of years ago Adaptedness is generally a quantitative complex feature of the plant involving many traits many of which are quantitative Adaptation to stresses like cold drought or diseases are among the most central problems in a world grappling with global food security Modern plant breeding based on mendelian genetics has made plant improvement more effective and more precise and selective Molecular genetics and genetic engineering has considerably increased this selectivity down to single genes affecting single traits The time has come when plant breeding efficiency may cause loss of genetic resources and adaptation In these proceedings an effort is made to merge modern plant breeding efficiency with ecological aspects of plant breeding

reflected in adaptation. It is hoped that this merger results in more sustainable use of genetic resources and physical environments. The book is based on 10 keynotes addressing a wide spectrum of themes related to adaptation. In addition, each subject is further elaborated in up to three case studies on particular plant species or groups of plants. The keynotes do in fact overlap to some degree and there are articles in this volume that seemingly contradict each other, a common aspect in advanced fields of research. The keen reader may conclude that in a world where climates and environments are under continuous change and where human society is more and more polarized into a developed and a developing part, adaptation of our cultivated plants has different constraints on yields depending on ecology and indeed economy.

Genetics and Breeding of Sugar Beet Enrico Biancardi, 2005-01-04. The book comes during a time of rapid expansion in molecular technology-based selection approaches that are destined to modify or supplement conventional breeding methodology. The new technologies will allow genetic and physiological factors influencing sugar yield and quality to be assessed in great detail and manipulated. These novel techniques will

*Turfgrass Biology, Genetics, and Breeding* Michael D. Casler, Ronny R. Duncan, 2003-01-30. The cultivation of various turfgrasses has evolved into a dynamic multi-billion dollar industry. Yet there is still a real lack of information available for those seeking to understand the complex science behind its growth. This book, edited by two knowledgeable and highly respected experts, presents for the first time a comprehensive study of the various types of turfgrasses, their genetic and biological makeup, and the specifics of when, how, where, and why each species was adapted for use. The only book that deals specifically with the science behind the major types of turfgrasses, *Turfgrass Biology* will prove to be an invaluable time-saving reference and research tool for professionals interested or engaged in the genesis of turfgrasses.

*Technologies in Plant Biotechnology and Breeding of Field Crops* Kamaluddin, Usha Kiran, M. Z. Abdin, 2022-10-05. This edited book is a comprehensive compilation of principles, conventional and molecular approaches used to develop improved varieties and hybrids of major crops in light of their origin, evolution, taxonomy, production, and productivity, and need by human civilization. The book covers breeding prospects of all important food and commercial crops. It highlights the importance of breeding tools and techniques in ensuring food security. This book is of interest to teachers, researchers, agriculture scientists, capacity builders, and policymakers. Also, the book serves as additional reading material for undergraduate and graduate students of agriculture, soil science, and environmental sciences. National and international agricultural scientists and policymakers will find this book useful.
