Introductory Geographic Information Systems John R. Jensen, Ryan R. Jensen, 2013 Geospatial technologies in general and Geographic Information Systems GIS in particular are becoming increasingly important in our society GIS technology is used to identify the optimal routes for emergency vehicles to determine the best locations for various businesses schools and facilities to monitor the growth and expansion of urban areas as a way to manage natural resources and much more Principles of Geographic Information Systems by John Jensen and Ryan Jensen is an ideal introduction for those who know very little about geographic information systems and spatial analysis Relatively complex GIS principles are introduced in basic terms often using graphics to communicate principles rather than complex mathematical equations Content is not geared toward any single commercial GIS software program and the book's timely practical examples and extensive visual format appeal to today's students This text can be used at the undergraduate or graduate level in one or two semester courses in Introductory and Intermediate GIS yet can also be useful for professionals looking to increase their knowledge in this subject area Note If you are purchasing the standalone text or electronic version mygeoscienceplace does not come automatically packaged with the text To purchase mygeoscienceplace please visit www.mygeoscienceplace.com

Singh, M. Fiorentino, 2013-03-09 The last few years have witnessed an enormous interest in application of GIS in hydrology and water resources This is partly evidenced by organization of several national and international symposia or conferences under the sponsorship of various professional organizations This increased interest is in a large measure in response to growing public sensitivity to environmental quality and management The GIS technology has the ability to capture store manipulate analyze and visualize the diverse sets of geo referenced data On the other hand hydrology is inherently spatial and distributed hydrologic models have large data requirements The integration of hydrology and GIS is therefore quite natural The integration involves three major components 1 spatial data construction 2 integration of spatial model layers and 3 GIS and model interface GIS can assist in design calibration modification and comparison of models This integration is spreading worldwide and is expected to accelerate in the foreseeable future Substantial opportunities exist in integration of GIS and hydrology We believe there are enough challenges in use of GIS for conceptualizing and modeling complex hydrologic processes and for globalization of hydrology The motivation for this book grew out of the desire to provide under one cover a range of applications of GIS technology in hydrology It is hoped that the book will stimulate others to write more comprehensive texts on this subject of growing importance Principles of Geographical Information Systems Peter A.
