(U. S.), 2017-10-19 This new edition of *Soil Erosion Research Methods* retains the themes and layout of the first edition However most chapters have been revised and some additional chapters have been added There are new chapters on modeling wind and water erosion Extensive revisions and updating have been done in chapters dealing with assessment of erosivity and erodibility erosion crop productivity measuring sediment yield from river basins and field plot techniques There is extensive updating of current statistics on the global magnitude of soil erosion by water and wind and on denudation rates Several new authors have made significant improvements in revising and updating available information **Fundamentals**

of Geomorphology Richard Huggett, 2016-11-21 The new fourth edition of Fundamentals of Geomorphology continues to provide a comprehensive introduction to the subject by discussing the latest developments in the field as well as covering the basics of Earth surface forms and processes The revised edition has an improved logically cohesive structure added recent material on Quaternary environments and landscapes landscape evolution and tectonics as well as updated information in fast changing areas such as the application of dating techniques digital terrain modelling historical contingency preglacial landforms neocatastrophism and biogeomorphology The book begins with a consideration of the nature of geomorphology process and form history and geomorphic systems and moves on to discuss Endogenic processes structural landforms associated with plate tectonics and those associated with volcanoes impact craters and folds faults and joints Exogenic processes landforms resulting from or influenced by the exogenic agencies of weathering running water flowing ice and meltwater ground ice and frost the wind and the sea landforms developed on limestone and long term geomorphology a discussion of ancient landforms including palaeosurfaces stagnant landscape features and evolutionary aspects of landscape change Featuring over 400 illustrations diagrams and tables Fundamentals of Geomorphology provides a stimulating and innovative perspective on the key topics and debates within the field of geomorphology Written in an accessible and lively manner and providing guides to further reading chapter summaries and an extensive glossary of key terms this is an indispensable undergraduate level textbook for students of physical geography

Global Geomorphology Michael A. Summerfield, 2014-05-12 The plate tectonics revolution in the earth sciences has provided a valuable new framework for understanding long term landform development This innovative text provides a comprehensive introduction to the subject of global geomorphology with the emphasis placed on large scale processes and phenomena Integrating global tectonics into the study of landforms and incorporating planetary geomorphology as a major component the author discusses the impact of climatic change and the role of catastrophic events on landform genesis and includes a comprehensive study of surface geomorphic processes

Rocks and Landforms John Gerrard, 2012-12-06 Geomorphology can be defined simply as the study of landforms Landforms are the result of the interaction between what Ritter 1978 has called the driving and resisting forces The driving forces or processes are the methods by which energy is exerted on earth materials and include both surface geomorphological or exogenous processes and subsurface geological or endogenous processes The resisting forces are the surface materials with their inherent resistances determined by a complex combination of rock properties Stated in these simple terms it would be expected that both sides of the equation be given equal weight in syntheses of landform evolution However this has not been the case Until about the 1950s geomorphology was mainly descriptive and concerned with producing time dependent models of landscape evolution Although the form of the land was the main focus there was little detailed mention of process and scant attention to the properties of surface materials There were of course exceptions In the late 19th century G K Gilbert was stressing the equilibrium between landforms and processes Many hydrologists were

examining the detailed workings of river systems and drainage basins culminating in the classic paper of Horton 1945

Lacustrine Facies Analysis P. Anadon, L. L. Cabrera, K. Kelts, 2009-04-03 This book considers the deposition of sediments in different types of lakes and shows how changes in the lake environment can be interpreted from the sediment facies at the lake floor Lakes are particularly sensitive to climate change and thus their sediments are accurate indicators of environmental change and palaeoclimate This volume examines both ancient and modern lake deposits which is particularly appropriate considering the current widespread interest in global climate change with particular emphasis on global warming The book is global in approach and contains fifteen papers from an internationally acclaimed authorship The volume will be of particular interest to sedimentologists petroleum geologists economic geologists and geographers with a particular interest in global climate change
