Advanced analysis of diffusion MRI data Xuan Gu,2019-11-19 Diffusion magnetic resonance imaging diffusion MRI is a non invasive imaging modality which can measure diffusion of water molecules by making the MRI acquisition sensitive to diffusion Diffusion MRI provides unique possibilities to study structural connectivity of the human brain e g how the white matter connects different parts of the brain Diffusion MRI enables a range of tools that permit qualitative and quantitative assessments of many neurological disorders such as stroke and Parkinson This thesis introduces novel methods for diffusion MRI data analysis Prior to estimating a diffusion model in each location voxel of the brain the diffusion data needs to be preprocessed to correct for geometric distortions and head motion A deep learning approach to synthesize diffusion scalar maps from a T1 weighted MR image is proposed and it is shown that the distortion free synthesized images can be used for distortion correction An evaluation involving both simulated data and real data of six methods for susceptibility distortion correction is also presented in this thesis A common problem in diffusion MRI is to estimate the uncertainty of a diffusion model An empirical evaluation of tractography a technique that permits reconstruction of white matter pathways in the human brain is presented in this thesis The evaluation is based on analyzing 32 diffusion datasets from a single healthy subject to study how reliable tractography is In most cases only a single dataset is available for each subject This thesis presents methods based on frequentistic bootstrap as well as Bayesian inference which can provide uncertainty estimates when only a single dataset is available These uncertainty measures can then for example be used in a group analysis to downweight subjects with a higher uncertainty
