Principles of naval architecture. 3. Motions in waves and controllability Edward V. Lewis,1989 **Motions Waves and Controllability** Edward V. Lewis,1989 Nonlinear Waves and Offshore Structures Cheung Hun Kim,2008 The responses of offshore structures are significantly affected by steep nonlinear waves currents and wind leading to phenomena such as springing and ringing of TLPs slow drift yaw motion of FPSOs and large oscillations of Spar platforms due to vortex shedding Research has brought about significant progress in this field over the past few decades and introduced us to increasingly involved concepts and their diverse applicability Thus an in depth understanding of steep nonlinear waves and their effects on the responses of offshore structures is essential for safe and effective designs This book deals with analyses of nonlinear problems encountered in the design of offshore structures as well as those that are of immediate practical interest to ocean engineers and designers It presents conclusions drawn from recent research pertinent to nonlinear waves and their effects on the responses of offshore structures Theories observations and analyses of laboratory and field experiments are expounded such that the nonlinear effects can be clearly visualized *Practical Design of Ships and Other Floating Structures* You-Sheng Wu,Guo-Jun Zhou,Wei-Cheng Cui,2001-08-22 This proceedings contains the papers presented at The 8th International Symposium on Practical Design of Ships and Other Floating Structures held in China in September 2001 the first PRADS of the 21st Century The overall aim of PRADS symposia is to advance the design of ships and other floating structures as a professional discipline and science by exchanging knowledge and promoting discussion of relevant topics in the fields of naval architecture and marine and offshore engineering In line with the aim in welcoming the new era this Symposium is intended to increase international co operation and give a momentum for the new development of design and production technology of ships and other floating structures for efficiency economy safety and environmental production The main themes of this Symposium are Design Synthesis Production Hydrodynamics Structures and Materials of Ships and Floating Systems Proposals for over 270 papers from 26 countries and regions within the themes were received for PRADS 2001 and about 170 papers were accepted for presentation at the symposium With the high quality of the proposed papers the Local Organising Committee had a difficult task to make a balanced selection and to control the total number of papers for fitting into the allocated time schedule approved by the Standing Committee of PRADS Volume I covers design synthesis production and part of hydrodynamics Volume II contains the rest of hydrodynamics and structures and materials

Principles of Naval Architecture Edward V. Lewis,Society of Naval Architects and Marine Engineers (U.S.),1988 **Ship Motion Control** Tristan Perez,2006-03-30 engineers into a single volume whilst concentrating on two important research control design problems autopilots with rudder roll stabilization and fin and combined rudder fin stabilization He has been guided by some of the leading marine control academics in particular Mogens Blanke and Thor Fossen indeed Chapters 3 and

4 on kinematics and kinetics of ship motion are jointly authored with Professor Fossen There are some 240 cited references an invaluable resource for interested readers The volume is likely to appeal to a wide range of readers who will each be able to extract something different from the various parts of the monograph Part I has some four chapters on the modelling fundamentals including kinematics dynamics and actuators Part II is a very useful survey of the ship roll stabilization problem and how ship roll performance is measured and assessed This clearly motivates the human necessity for roll reduction and roll stabilization Parts III and IV move on to the control systems aspects of the various stabilization designs Valuable material here includes a study of system performance limitations as caused by the presence of non minimum phase characteristics and actuator saturation Chapter 10 has an interesting historical review of these marine control problems stretching back some thirty years into the 1970s

Manoeuvring and Control of Marine Craft 2003 (MCMC 2003) Joan Battle,M. Blanke,2004 The papers presented in this volume cover recent progress in applications of new theory on manoeuvring related problems for surface ships and control and sensor problems for underwater vehicles
