Natural Resource and Environmental Decision Making Daniel L. Schmoldt, 2001-06-30 Decision making in land management involves preferential selection among competing alternatives Often such choices are difficult owing to the complexity of the decision context Because the analytic hierarchy process AHP developed by Thomas Saaty in the 1970s has been successfully applied to many complex planning resource allocation and priority setting problems in business energy health marketing natural resources and transportation more applications of the AHP in natural resources and environmental sciences are appearing regularly This realization has prompted the authors to collect some of the important works in this area and present them as a single volume for managers and scholars Because land management contains a somewhat unique set of features not found in other AHP application areas such as site specific decisions group participation and collaboration and incomplete scientific knowledge this text fills a void in the literature on management science and decision analysis for forest resources **Principles of Risk Analysis** Charles Yoe, 2011-09-15 In every decision context there are things we

know and things we do not know Risk analysis uses science and the best available evidence to assess what we know and it is intentional in the way it addresses the importance of the things we don t know Principles of Risk Analysis Decision Making Under Uncertainty lays out the tasks of risk analysis in a straightforward conceptual manner that is consistent with the risk models of all communities of practice It answers the questions what is risk analysis and how do I do this Distilling the common principles of the many risk tribes and dialects into serviceable definitions and narratives the book provides a foundation for the practice of risk analysis and decision making under uncertainty for professionals from all walks of life In the first part of the book readers learn the language models and concepts of risk analysis and its three component tasks risk management assessment and communication The second part of the book supplies the tools techniques and methodologies to help readers apply the principles From problem identification and brainstorming to model building and choosing a probability distribution the author walks readers through the how to of risk assessment Addressing the critical task of risk communication he explains how to present the results of assessments and how to develop effective messages The book s

simple and straightforward style based on the author's decades of experience as a risk analyst trainer and educator strips away the mysterious aura that often accompanies risk analysis. It describes the principles in a manner that empowers readers to begin the practice of risk analysis to better understand and use the models and practice of their individual fields and to gain access to the rich and sophisticated professional literature on risk analysis.
