Foster, World Health Organization, International Program on Chemical Safety,2001 Intended as a tool for use by public health officials research and regulatory scientists and risk managers this publication seeks to provide a scientific framework for the use and interpretation of reproductive toxicity data from human and animal studies It also discusses emerging methodology and testing strategy in reproductive toxicity The text focuses on approaches to assessing reproductive toxicity in males and females including sexual dysfunction and infertility and many aspects of developmental toxicity following both prenatal and postnatal exposure from conception to sexual maturation It is

an overview of the major scientific principles underlying hazard identification testing methods and risk assessment strategies in human reproductive toxicity It also discusses the evaluation of reproductive toxicity data in the context of the extensive risk assessment methodology that has emerged over the past 10 15 years **Developments in Aging** United States. Congress. Senate. Special Committee on Aging, 1994 Principles and Methods for the Assessment of Risk from Essential Trace Elements Inter-Organization Programme for the Sound Management of Chemicals, International Program on Chemical Safety, 2002-02 The risk assessment approach described in this monograph applies only to essential trace elements ETEs involved in human health and not to non essential elements. The purpose of this monograph is to provide the scientific principles that support the concept of an acceptable range of oral intake AROI which uses a homeostatic model for determining the range of dietary intakes for essential trace elements ETEs that meet the nutritional requirements of a healthy population and avoid excess intakes To facilitate comparisons AROIs are discussed in relation to other risk assessment approaches Although it includes examples this monograph is not a compendium of assessments on ETEs nor is it a textbook detailing the scientific basis of risk assessment of the derivation of dietary reference intakes Described in the book is the process of risk assessment which begins with the selection of the database for a particular ETE A weight of evidence approach is then used for hazard identification selecting relevant end point of deficient and excess exposures Next the probability of risk and the severity of various effects are quantified and critical effects are selected The AROI is then established by balancing end points of comparable health significance At this time the exposure assessment is conducted Finally a risk characterization enumerating the strengths and weaknesses of the databases is performed integrating the AROI and exposure assessment The amount of work which is entailed in these volumes is very great and the low cost does not reflect the time of experts travelling nor even the hours expended UN staff in Geneva This well informed book with its predecessors in the series is essential reading for biologists chemists and medical professionals concerned with essential trace elements The International Journal of Environmental Studies Biological Basis of Geriatric Oncology Lodovico Balducci, Martine Extermann, 2006-06-14 Biological Basis of Geriatric Oncology highlights research issues that are specific to geriatric oncology in the field of carcinogenesis and cancer prevention and treatment based on the biologic interactions of cancer and age It illustrates the benefit of the principles of geriatrics in the management of cancer in the older individual This volume provides a frame of reference for practicioners of any specialties involved in the management of older patients and for oncologists involved in the management of cancer of older individuals It is a source for basic and clinical scientists exploring the interactions and emerging information of cancer and aging Senate Report No. 105-36, 105-1, 1997
