Fruit Fly Research and Development in Africa - Towards a Sustainable Management Strategy to Improve Horticulture Sunday Ekesi, Samira A. Mohamed, Marc De Meyer, 2016-12-01 Horticultural sector presents many opportunities for economic development and improving livelihood of growers but several factors constrain production and limit the potential for trade of fruits and vegetables Tephritid fruit flies constitute a major constraint They cause enormous losses through direct feeding damage and loss of market opportunities through imposition of quarantine restrictions by importing countries to prevent entry and their establishment In Africa several native *Ceratitis* and *Dacus* spp and exotic *Bactrocera* and *Zeugodacus* spp species inflict considerable losses to horticulture causing losses ranging from 30 90% Over the past 10 years of R coverage of African native species has been limited largely to *Bactrocera oleae* and *Ceratitis capitata* which are not economically important species in many Africa countries Indeed no book exist that have explicitly addressed economically important African fruit flies and none of the various reviews have specifically focused on the status of the bioecology economic impact and management of exotic and native fruit flies including several potentially invasive *Dacus* species attacking vegetables in Africa This book consolidates this status of knowledge and socio economic impact of various intervention techniques that are currently being applied across Africa The timing of the book is especially pertinent due to the changing fruit fly landscape in Africa caused by arrivals of the highly destructive alien invasives *Bactrocera dorsalis* B
