Griffin* Roger C. Griffin, Stanley Sacharow, 1972 **Principles of Package Development** Roger C. Griffin, 2012-03-29 Since the first edition of Principles of Packaging Development was published the packaging industry has undergone many profound changes These have included the virtual elimination of cellophane and its replacement with oriented polypropylene as a carton overwrap fluid milk in blow molded HDPE bottles PET beverage bottles cookie bags and cartons lined with polyolefin coextrusions instead of waxed glassine and bread in reclosable polyolefin and coextruded film bags New phrases have also worked their way into the lexicon of the practicing packaging technologist such as child resistance and tamper evident This most popular text on packaging demanded updating How these phrases and ideas have affected the industry in the 1980s and how they will probably alter its course in the future are treated New concepts of packaging system planning and forecasting techniques are intruding into package management and new chapters will introduce them to the reader The years have added a certain degree of maturity to the packaging industry Not only have the original authors broadened their perspectives and changed professional responsibilities we have also included a third co author Dr Aaron L Brody whose experience in the industry academic background and erudite insights into the very nature of packaging have added an unparalleled degree of depth to this book We would like to thank David L **Principles of Package Development** Roger Castle Griffin, 1972 **Principles of Aseptic Processing and Packaging** Philip E. Nelson, 2010 In aseptic processing food is stored at ambient temperatures in sterilized containers free of spoilage organisms and pathogens The results of this food technology come in all shapes and sizes from the consumer packages of milk on the shelves of the supermarket to the huge containers full of orange juice transported around the world by cargo ships Over the last couple of

decades aseptic bulk storage and distribution has revolutionized the global food trade For example more than 90 percent of the approximately 24 million tons of fresh tomatoes harvested globally each year are aseptically processed and packaged for year round remanufacture into various food products The technology has also been applied to bring potable water and emergency food aid to survivors of the 2004 tsunami in Southeast Asia and the victims of Hurricane Katrina in 2005 as well as to other crisis situations worldwide The construction of new aseptic facilities continues around the world and an up to date understanding of the technology is essential for a new generation of food scientists and engineers alike The contributors to this important textbook discuss all aspects of aseptic processing and packaging focusing on the areas that most influence the success or failure of the process Fully updated this new edition covers all areas of chemistry microbiology engineering packaging and regulations as they relate to aseptic processing
