Without Good Reason Edward Stein, 1996-01-11 Are humans rational Various experiments performed over the last several decades have been interpreted as showing that humans are irrational we make significant and consistent errors in logical reasoning probabilistic reasoning similarity judgements and risk assessment to name a few areas But can these experiments establish human irrationality or is it a conceptual truth that humans must be rational as various philosophers have argued In this book Edward Stein offers a clear critical account of this debate about rationality in philosophy and cognitive science He discusses concepts of rationality the pictures of rationality that the debate centres on and assesses the empirical evidence used to argue that humans are irrational He concludes that the question of human rationality must be answered not conceptually but empirically using the full resources of an advanced cognitive science Furthermore he extends this conclusion to argue that empirical considerations are also relevant to the theory of knowledge in other words that epistemology should be naturalized
