Rational Therapeutics For Infants And Children Workshop Summary:

Rational Therapeutics for Infants and Children Roundtable on Research and Development of Drugs Biologics and Medical Devices, Division of Health Sciences Policy, Institute Of Medicine, 2000-04-07 The Institute of Medicine's IOM's Roundtable on Research and Development of Drugs Biologics and Medical Devices evolved from the Forum on Drug Development which was established in 1986. Sponsor representatives and IOM determined the importance of maintaining a neutral setting for discussions regarding long term and politically sensitive issues justified the need to revise and enhance past efforts. The new Roundtable is intended to be a mechanism by which a broad group of experts from the public and private sectors can be convened to conduct a dialogue and exchange information related to the development of drugs biologics and medical devices. Members have expertise in clinical medicine pediatrics clinical pharmacology health policy health insurance industrial management and product development and they represent interests that address all facets of public policy issues. From time to time the Roundtable requests that a workshop be conducted for the purpose of exploring a specific topic in detail and obtaining the views of additional experts. The first workshop for the Roundtable was held on April 14 and 15 1998 and was entitled Assuring Data Quality and Validity in Clinical Trials for Regulatory Decision Making. The summary on that workshop is available from IOM. This workshop summary covers the second workshop which was held on May 24 and 25 1999 and which was aimed at facilitating the development and proper use of drugs biologics and medical devices for infants and children. It explores the scientific underpinnings and clinical needs as well as the regulatory legal and ethical issues raised by this area of research and development.

Research Involving Children Institute of Medicine,Board on Health Sciences Policy,Committee on Clinical Research Involving Children,2004-08-09 In recent decades advances in biomedical research have helped save or lengthen the lives of children around the world With improved therapies child and adolescent mortality rates have decreased significantly in the last half century Despite these advances pediatricians and others argue that children have not shared equally with adults in biomedical advances Even though we want children to benefit from the dramatic and accelerating rate of progress in medical care that has been fueled by scientific research we do not want to place children at risk of being harmed by participating in clinical studies Ethical Conduct of Clinical Research Involving Children considers the necessities and challenges of this type of research and reviews the ethical and legal standards for conducting it It also considers problems with the interpretation and application of these standards and conduct concluding that while children should not be excluded from potentially

beneficial clinical studies some research that is ethically permissible for adults is not acceptable for children who usually do not have the legal capacity or maturity to make informed decisions about research participation The book looks at the need for appropriate pediatric expertise at all stages of the design review and conduct of a research project to effectively implement policies to protect children It argues persuasively that a robust system for protecting human research participants in general is a necessary foundation for protecting child research participants in particular An Examination of Pediatric Drug Testing Victoria J.
