Kidney Disease and Nephrology Index ,1976-07 *Oxford Textbook of Clinical Nephrology Volume 3* Alex M. Davison,2005 Authoritative well written and comprehensive textbook of clinical nephrology combining the clinical aspects of renal disease important for daily clinical practice while giving extensive information about the underlying basic science and current evidence available This new edition highlights the numerous changes in clinical management that have arisen as a result of recently concluded clinical trials and there are now specific formal guidelines for optimal treatment of patients Each section of the textbook has been critically and comprehensively edited under the auspices of one of the leading experts in the field The emphasis throughout is on marrying advances in scientific research with clinical management Where possible treatment algorithms are included to aid patient care **Pediatric Nephrology** Ellis D. Avner,William E. Harmon,Patrick Niaudet,Norishige Yoshikawa,2009-08-20 Here is an extensive update of Pediatric Nephrology which has become the standard reference text in the field It is global in perspective and reflects the international group of editors who are well recognized experts in pediatric nephrology Within this text the development of kidney structure and function is followed by detailed and comprehensive chapters on all childhood kidney diseases **The Renin-angiotensin System and Progression of Renal Diseases** Gunter Wolf,2001-01-01 The renin angiotensin system RAS has long been seen as a systemic endocrine system in which angiotensin II ANG II is solely involved in blood pressure regulation and the mediation of aldosterone release However it is now known that specific organ systems exhibit their own local RAS functioning for the most part independently from their systemic counterpart A deluge of data from the last decade has shown that ANG II displays many more functions than just regulating blood pressure ANG II is a growth factor exhibits profibrogenic actions and even serves as a proinflammatory cytokine It is now clear that this peptide plays a pivotal role in the progression of chronic kidney disease towards endstage renal failure Clinical studies have provided compelling evidence that interference with ANG II slows this deterioration of renal function This publication presents the first comprehensive summary of this important topic Basic concepts as well as clinical aspects of the RAS are reviewed by international experts who made many of the key discoveries that constitute our contemporary understanding of ANG II as a central factor in the progression of renal disease This publication should be read by physicians treating patients with chronic renal diseases internists nephrologists and urologists Moreover basic scientists such as renal physiologists renal pathologists and biochemists who want a comprehensive overview of the subject will profit from reading this book **Oxford Textbook of Clinical Nephrology** Alex M. Davison,1998 The first edition of the Oxford Textbook of Clinical Nephrology established itself as the leading clinical reference text for practicing nephrologists worldwide The second edition comes five years later during which time there have

been significant advances in the understanding of the pathogenesis of renal disease and in therapy. Placing existing treatment on a firm scientific basis or stopping ineffective or dangerous treatment is as important as introducing proven new therapies and all the contributors have taken this fully into account. During the development of the second edition all the first edition chapters were critically reviewed by practicing nephrologists and their suggestions have been incorporated to make the text even more practically useful and logically arranged. Expert topic editors for pediatrics, pathology, physiology and pharmacology have checked all relevant sections from their own perspective. This edition is the only major textbook of nephrology to be printed in full colour throughout. Reproduction of the histological and clinical illustrations in their natural colours reveals their true significance and there are numerous new colour illustrations. There are new chapters on Imaging, tactics, a rationale, Structural basis of glomerular function, Symptomless patient with abnormal urine, Immunotactoid fibrillary nephritis, Mechanisms of interstitial disease and Host factors in the pathogenesis of urinary tract infection. The sections on acute and chronic renal failure have been reorganized with new chapters on the Epidemiology of acute renal failure, Dialysis and haemoperfusion treatment in acute poisoning and Genesis of the uraemic syndrome. In addition the chapter on Gastrointestinal effects in chronic renal failure includes a new discussion of the various forms of hepatitis. A new section on Acute renal failure in special settings includes new chapters on pregnancy, tropical illness and the elderly. In the inherited diseases section there is a new chapter on Inherited disorders of purine metabolism and in the structural diseases section a new chapter on Medullary sponge kidney. The section on malignant disease has new chapters on Tumours of the bladder and Tumours of the prostate. The result is an outstanding up to date international clinical text which no clinical nephrologist can afford to be without. Index Medicus, 2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings.

Helbert, 1999-07-31. For the last ten years there has been an exponential increase in the number of scientific reports on methodological and mechanistic aspects of renal tubular cell culture. This publication provides an update on the state of the art presenting various areas of

research Starting off with current methodological aspects in renal primary cell practice the focus then shifts to the complex issue of interstitial cells of the kidney presenting the different techniques for the isolation of the fibroblasts and their identification in cultures by morphological criteria Further chapters relate to topics such as the flow sorting of cells targeted oncogenesis in transgenic mice advances and possible drawbacks of cultured cells in the elucidation of phenotypic changes induced by transgenesis the role of the proximal tubular cell as mediator of interstitial inflammation and tissue injury fibrosis as well as the association of glucose induced accumulation of type IV collagen and fibronectin with alterations in the degradative pathways of these matrix components Primary cultures of human renal cells are well suited for future studies on the therapeutic efficacy of gene therapy decorin growth factor receptor antagonist and somatostatin analogues greatly enhancing our understanding of the molecular mechanisms and ultimately treatment of progressive tubulo interstitial disease Nephrologists pharmacologists and physiologists interested in cell culture will find this publication of great value

Tubulointerstitial and Cystic Disease of the Kidney Susan M. Dodd, 2012-12-06 Over recent years much renal research has focused on the pathology of the glomerulus where many primary renal insults occur However nearly thirty years have passed since Risdon's study made the apparently anomalous observation that the extent of damage to the tubulointerstitial compartment is the major determinant of renal outcome in a variety of human glomerular diseases This volume covers various aspects of tubulointerstitial disease and starts with an update on cystic disease of the kidney by Drs WILSON and FALKENSTEIN which includes recent experimental data on the altered properties of cystic epithelium My own chapter gives an overview of the mechanisms of tubulo interstitial damage in progressive renal disease and includes a discussion of the possible role of cytokines vasoactive peptides and peptide growth factors found over the last few years to be secreted by renal tubular cells These comments are expanded in the contribution by Dr WOLF and Professor NEILSON who provide a detailed account of the cellular biology of tubulointerstitial growth The earliest studies from the 1960s attempted to correlate histo morphometry of the tubulointerstitium with renal outcome Dr KHAN and Professor SINNIAH provide us with an update on morphometric methods as applied to the kidney using new techniques Similar techniques are employed by Dr IVANYI and Professor OLSEN who give a detailed stereomorphological account of tubulitis both in acute allograft rejection where its recognition is central to the diagnosis and in other forms of tubulointerstitial disease *Biology of Renal*
