

Drainage Engineering

Principles and Practices

S. K. Gupta

Drainage Engineering Principles and Practices is prepared to serve as a textbook of Drainage Engineering in Agricultural and Civil Engineering colleges. Appropriate theoretical and objective type questions have been framed to provide students a feel of what they can expect in their examinations. As such, it can prove to be a handy sourcebook for the competitive examinations.

Besides, the book serves as an user-oriented training material in specialized training programs for the officers of the line departments such as water resources, agriculture, irrigation, private enterprises and non-government organizations.

Sediment Transport in Irrigation Canals Herman Depeweg, Krishna P. Paudel, Néstor Méndez V, 2014-10-06 Sediment transport in irrigation canals influences to a great extent the sustainability of an irrigation system Unwanted erosion or deposition will not only increase maintenance costs but may also lead to unfair unreliable and unequitable distribution of irrigation water to the end users Proper knowledge of the characteristics including behaviour and transport of sediment will help to design irrigation systems plan efficient and reliable water delivery schedules to have a controlled deposition of sediments to estimate and arrange maintenance activities etc The main aim of these lecture notes is to present a detailed analysis and physical and mathematical descriptions of sediment transport in irrigation canals and to describe the mathematical model SETRIC that predicts the sediment transport deposition and entrainment rate as function of time and place for various flow conditions and sediment inputs The model is typically suited for the simulation of sediment transport under the particular conditions of non wide irrigation canals where the flow and sediment transport are strongly determined by the operation of the flow control structures The lecture notes will contribute to an improved understanding of the behaviour of sediments in irrigation canals They will also help to decide on the appropriate design of the system the water delivery plans to evaluate design alternatives and to achieve an adequate and reliable water supply to the farmers
