Mapping Our Genes Lois Wingerson,1990 Follows the stories of people discovering their genetic heritage and the scientific progress toward gaining control over our human destiny **Mapping Our Genes** Lois Wingerson,1991 Eye opening and mind expanding Mapping Our Genes tells of the experts who are brightly hopeful about using genetic mapping and engineering as weapons in the war against the many incurable genetically inherited maladies **Biotechnology** Kim Guenther,1996-09 A complete bibliography on the issues of commercialization economics in biotechnology Includes cost benefit analysis market research forecasting economic impact market trends etc Each of the 209 entries includes title author language An abstract is included for some books Subject author indices **Clinical Bioethics** James F. Drane,1994-03 Medical practice is an inherently ethical enterprise More than ever before medical practice requires that medical professionals develop and exercise high ethical standards Health care practitioners who ignore basic concepts of medical ethics risk exposing their patients to serious harm and open themselves and their institutions to charges of malpractice Clinical Bioethics provides for the busy clinical professional a concise comprehensive treatment of the basics in this complex new field **Imagination** José Van Dijck,1998-01-31 Genetics seems more popular then ever DNA technology not only sustains large areas of biomedicine and business but also prevails in social and legal practices and takes root in cultural products Since the late 1950s the public image of genetics metamorphosed from a suspect branch of research into a thriving well funded field of biomedicine Images and imaginations have played a crucial role in the popularization of genetic knowledge The media played up images of engineered bugs scientists promoted images of selfish genes and science fiction writers infested the imagination with stories of cloned monsters Imag e nation examines the role of science journalism and fiction in the popularization of genetics **Genetic Imaginations** Peter Glasner,Harry Rothman,2017-07-05 The title of this book derives from C Wright Mills classic *The Sociological Imagination* Penguin 1970 the chapters in this volume address these issues through discussions of choice and informed decision making risks and hazards the economic and political organization of new technology and the publics as well as the scientist s understanding of science **The Code of Codes** Daniel J. Kevles,Leroy E. Hood,1992 The ultimate goal of the pioneering project outlined in this book is to map our genome the key to what makes us human in detail The Code of Codes is a collective exploration of the substance and possible consequences of th is project in relation to ethics law and society **The Greening of Sovereignty in World Politics** Karen Litfin,1998 This is the first book to connect two important subfields in international relations global environmental politics and the study of sovereignty the state s exclusive authority within its territorial boundaries The authors argue that the relationship between environmental practices and sovereignty is by no means straightforward and in fact elucidates some of the core issues and challenges in world politics today Although a number of international relations scholars have assumed that transnational environmental organizations and institutions are eroding sovereignty this book makes the case that

ecological integrity and state sovereignty are not necessarily in opposition It shows that the norms of sovereignty are now shifting in the face of attempts to cope with ecological destruction but that this greening of sovereignty is an uneven variegated and highly contested process By establishing that sovereignty is a socially constructed institution that varies according to time and place with multiple meanings and changing practices *The Greening of Sovereignty in World Politics* illuminates the complexity of the relationship between sovereignty and environmental matters and casts both in a new light Contributors Daniel Deudney Margaret Scully Granzeier Joseph Henri Jupille Sheldon Kamieniecki Thom Kuehls Ronnie D Lipschutz Karen T Litfin Marian A L Miller Ronald B Mitchell Paul Wapner Veronica Ward Franke Wilmer Food Biotechnology in Ethical Perspective Paul B. Thompson, 2007-05-05 Agrifood biotechnology the genetic transformation of plants and animals through recombinant means has created controversy in the food system for more than twenty years This thoroughly revised and amended edition of Paul B Thompson s path breaking study of ethical and philosophical issues raised by this technology up to date The original 1997 edition was the first book length treatment by a philosopher to focus on food and agricultural biotechnology covering ethical issues associated with risk assessment labelling animal transformation patents and the impact of biotechnology on traditional farming communities in both the developed and developing world The new edition reflects lessons from the hotly contested debates over those issues in the intervening decade and includes wholly new discussions on ethical issues associated with livestock cloning the Precautionary Principle and the transatlantic debate between United States and European perspectives on biotechnology Thompson s unique and insightful approach to addressing the risks and questions of public acceptability associated with novel technology stands as a model for anyone interested in technological innovation and social change The book should be of interest to scholars and citizens interested in the Internet or nanotechnology while it remains an essential resource for understanding the twists and turns of debate over the role of molecular genetics in the transformation of the global food system **Biotechnology, Commercialization, and Economic Aspects** Kim Guenther, 1994
