Mapping Time And Space How Medieval Mapmakers Viewed Their World:

Mapping Time and Space Evelyn Edson, 1999 Until recently medieval maps were often looked upon as quaint amusing and quite simply wrong By comparison the best examples of modern cartography appear to offer a much more accurate record of the world However as Professor Edson makes clear in this stimulating book when seeking the meaning and purpose of maps in the Middle Ages one cannot assume that they were used for the same purposes or had the same meaning as they do today In fact the differences in structure and content give us an intriguing insight into how medieval mapmakers and readers saw their world By a close study of the context in which the mapmakers produced their work it can be shown that they were often striving to present and make sense of a world picture that naturally incorporated key events from the past at the same time showing a narrative of human spiritual development from the Creation to the Last Judgment From publisher's description **The World Map, 1300-1492** Evelyn Edson, 2007-07-15 A history of the development of world maps during the

later medieval period in the centuries leading up to Columbus's journey In the two centuries before Columbus mapmaking was transformed **The World Map 1300 1492** investigates this important transitional period of mapmaking Beginning with a 1436 atlas of ten maps produced by Venetian Andrea Bianco Evelyn Edson uses maps of the fourteenth and fifteenth centuries to examine how the discoveries of missionaries and merchants affected the content and configuration of world maps She finds that both the makers and users of maps struggled with changes brought about by technological innovation the compass quadrant and astrolabe rediscovery of classical mapmaking approaches and increased travel To reconcile the tensions between the conservative and progressive worldviews mapmakers used a careful blend of the old and the new to depict a world that was changing and growing before their eyes This engaging and informative study reveals how the ingenuity creativity and adaptability of these craftsmen helped pave the way for an age of discovery A comprehensive and complex picture of the changing face of medieval geography With the mastery of a formidable palette of historiographic knowledge and well reasoned discussions of the sources **The World Map 1300 1492** will certainly remain an important work to consult for both medieval and early modern scholars for many years to come Ian J Aebel Terrae Incognitae **The World Map, 1300-1492** Evelyn Edson, 2007-05-30 In the two centuries before Columbus mapmaking was transformed **The World Map 1300 1492** investigates this important transitional period of mapmaking Beginning with a 1436 atlas of ten maps produced by Venetian Andrea Bianco Evelyn Edson uses maps of the fourteenth and fifteenth centuries to examine how the discoveries of missionaries and merchants affected the content and configuration of world maps She finds that both the makers and users of maps struggled with changes brought about by technological innovation the compass quadrant and astrolabe rediscovery of classical mapmaking approaches and increased travel To reconcile the tensions between the conservative and progressive worldviews mapmakers used a careful blend of the old and the new to depict a world that was changing and growing before their eyes This engaging and informative study reveals how the ingenuity creativity and
