American Attack Aircraft Since 1926 E.R. Johnson, 2012-05-28 This book provides a concise historical survey of the various types of aircraft used by the United States Army Air Corps Army Air Forces and Air Force and the Navy and Marine Corps to accomplish air attack missions since 1926 The text covers four types of fixed wing aircraft designated attack aircraft light medium and tactical bombers fighter bombers and adapted attack aircraft Reports on individual aircraft types include the aircraft's original military requirements production history and operational record usually accompanied by photographs illustrations and technical specifications Four appendices detail aircraft designations and nomenclature used throughout the military the organizational structure of various military air units aircraft designs that never made it into official service and the evolution of attack aircraft weapons and tactics *U.S. Air Services*, 1949 **Martin Model 262 Convoy Fighter**

Jared A. Zichek, 2015-10-03 The Martin Model 262 was an unconventional turboprop VTOL aircraft proposal submitted to the US Navy's convoy fighter competition of 1950 which ultimately produced the Convair XFY 1 Pogo and Lockheed XFV 1 Salmon It was a swept wing aircraft with triple vertical tails powered by an Allison XT 40 A 8 turboprop engine driving 16 ft contra rotating propellers The launch and recovery system consisted of a hinged vertical platform mounted on a merchant ship The pilot approached the platform from the side and hovered vertically just in front of it attaching the aircraft to the platform with a retractable nose gear spike and landing on two small retractable wing gear The fighter was armed with four 20 mm cannon and was designed to protect convoy vessels from enemy air attack In addition to the basic Model 262 Martin also presented Modifications A B and C the configurations of which were even more unorthodox than the main proposal Finally the book examines the Model 262P a handsome scale demonstrator designed to verify the basic soundness of the concept This ebook features a comprehensive text and 56 high resolution illustrations including detailed schematics artist's impressions and speculative color profiles of these remarkable secret aircraft projects This is the author's second book covering the USN convoy fighter competition the first one being devoted to the Goodyear GA 28A B also available in the Google Play store and other bookstores worldwide **American Aircraft Development Second World War Legacy**

William J. Norton, 2021-12-02 This volume focuses on the influence of America's Second World War aviation development and experience subsequent aviation technological advances and world events in shaping American choices in military aircraft and associated weapons development during the few years following the war It shows how air warfare weapons from the last conflict were carried forward and altered how new systems evolved from these and how the choices fared in the next war Korea The period was one of remarkable progress in a short span of time via a great many aircraft and weapons programs and associated technological progress These systems were of immense importance influencing and growing the engineering production and operational capabilities to be exploited for the next generation of weapons that soon followed Emphasized is the innovative features or new technology and how these contributed to advancing American military aviation influencing the

evolution of follow on models or types Included are military prototype experimental and research aircraft that are equally important in understanding the history of American aircraft development Combat employment progress and equipment adaptation during the Korean Conflict is then highlighted Tabulated characteristics are provided of those aircraft that entered production or represented significant technological advances influencing others that follow **Encyclopedia of US Air Force Aircraft and Missile Systems: Post-World War II bombers, 1945-1973** Marcelle Size Knaack,1978

Encyclopedia of U.S. Air Force Aircraft and Missile Systems Marcelle Size Knaack,United States. Air Force. Office of Air Force History,1978 *Jet Flying Boats* David Oliver,2018-03-15 In this book aviation historian David Oliver covers the little known flying boat legacy of the Second World War *Secret Wings of World War II* Lance Cole,2015-06-30 There are many myths and legends surrounding the advanced German aeronautical technology of the Second World War There are also facts and proven events Yet within these stories and behind these facts lie conspiracy theories mistaken assumptions and denials that seem to contradict the evidence So what really happened How far ahead were the German scientists And of even greater interest why and how There have been other books about advanced German wartime aeronautics yet few authors have fully examined the detail of the designs and their relevance to the fighter and bomber legends of the 1950s and 60s let alone the current crop of military and civil all wing or blended wing aircraft This book charts the story from it origins through current day innovations and beyond into the all wing future of tomorrow [The Martin Star](#) ,1950 **The Cutting Edge** Mark A. Lorell,Hugh P. Levaux,Elizabeth Giddens,Jennifer Gross,Erik Moller,1998-10-20 The proposition that innovation is critical in the cost effective design and development of successful military aircraft is still subject to some debate RAND research indicates that innovation is promoted by intense competition among three or more industry competitors Given the critical policy importance of this issue in the current environment of drastic consolidation of the aerospace defense industry the authors here examine the history of the major prime contractors in developing jet fighters since World War II They make use of an extensive RAND database that includes nearly all jet fighters fighter attack aircraft and bombers developed and flown by U S industry since 1945 as well as all related prototypes modifications upgrades etc The report concludes that 1 experience matters because of the tendency to specialize and thus to develop system specific expertise 2 yet the most dramatic innovations and breakthroughs came from secondary or marginal players trying to compete with the industry leaders and 3 dedicated military R D conducted or directly funded by the U S government has been critical in the development of new higher performance fighters and bombers *Mentor Inbound* Sheryl L. Hutchison,2009 The Rockford Register Republic newspaper carried the headline in January 1945 Aboard a Flying Fortress which appeared a flaming torch spewing gasoline from its load of 15 000 gallons and trailing fire like a comet a bomber crew which included LtCol Fred J Ascani Rockford pilot continued its run over a Ploesti oil field target and came through safely This was only one of 53 WWII missions flown by the talented aviator and reported by American newspapers Truth be told Ascani s contributions to the

development of airpower would be covered extensively by the media right up until he retired from the United States Air Force in 1973 History would remember MGen Ascani not only as the 1951 World Speed Record Holder but also as a tough and demanding task master who recognized the dangers of emerging aviation technology He was a devoted flyer who wanted to experience the thrill of every new engine and airframe designed to free man from the bonds of earth He would contribute to the Golden Age of Flight Test develop the process by which the fledgling USAF would turn experiments into combat system and then go on to direct the XB 70 program technology later used to build the world s first reusable space craft the space shuttle By the time he retired from the USAF in 1973 he had logged some 6288 hours of flying time in an incredibly unique variety of aircraft Mentor Inbound is his story as told to and recorded by Sheryl Hutchison **Early Jet Bombers,**

1944-1954 Leo Marriott,2020-01-19 The author of Early Jet Fighters 1944 1954 turns his attention to jet bombers in another stunning pictorial history Don t miss out on this one IPMS USA Using over 200 archive photographs Leo Marriott gives us a powerful portrait of the first decade in the development of the jet bomber This was a time of intense technical innovation that transformed the design and capabilities of the bomber and gave birth to a range of classic military aircraft in the USA Great Britain France and the Soviet Union The photographs take the story from the earliest jet bombers constructed in Germany toward the end of the Second World War to the successful designs both sides depended on through the first phase of the Cold War The pace of development was rapid and remarkable from initial prototypes built in Germany the Arado 234 and the Junkers Ju 287 to the fleets of advanced jet bombers like the British Canberra and V bombers the American B 47 and B 52 and the Soviet Il 28 Beagle and Tu 16 Badger The images of the prototypes give a fascinating insight into the extraordinary technical challenges and the ambition and inventiveness of the designers and manufacturers who overcame them Excellent coverage of a lesser known aspect of airpower development the wealth of photos makes it enjoyable and interesting Air Power History **Routledge Library Editions: Transport Economics**

Various,2021-07-29 This set of previously out of print titles is an essential reference collection on the topic of transport economics Providing in depth analysis on a variety of aspects including the economics of the airfreight shipping and rail industries it also examines the economics of road transport and more focused areas such as containerisation The World Aircraft Industry Daniel Todd,Jamie

Simpson,2019-08-13 Aircraft building is a major industry for many developed countries This book first published in 1986 provides a comprehensive survey of the state of the world aircraft industry It looks at how the industry developed and at its problems It examines the role of governments showing how this differs from country to country It concludes by assessing the prospects for the future shape of the industry particularly as newly industrialised countries become more involved

American Military Training Aircraft E.R. Johnson,2015-03-04 The U S did not become the world s foremost military air power by accident The learning curve World War I World War II the Korean War the Vietnam War the Gulf War and more recently the war on terror has been steep While climbing this curve the U S has not only produced superior military aircraft

in greater numbers than its foes but has in due course out trained them too This book provides a comprehensive historical survey of U S military training aircraft including technical specifications drawings and photographs of each type of fixed and rotary wing design used over a 98 year period to accomplish the first step of the learning process the training of pilots and aircrews **American Flying Boats and Amphibious Aircraft** E.R. Johnson,2016-03-29 This work is a comprehensive heavily illustrated history of the many flying boats and amphibious aircraft designed and built in the United States It is divided into three chronological sections the early era 1912 1928 the golden era 1928 1945 and the post war era 1945 present with historical overviews of each period Within each section individual aircraft types are listed in alphabetical order by manufacturer or builder with historical background technical specifications drawings and one or more photographs Appendices cover lesser known flying boat and amphibian types as well as various design concepts that never achieved the flying stage The Modern Hobby Guide To Topps Chewing Gum: 1938 To 1956 David Hornish,2013-07-03 The true story of Topps Chewing Gum and its founders the Shorin family This book takes a detailed look at Topps and two prior family businesses American Leaf Tobacco Company and American Gas Stations Full checklists and information are presented along with hundreds of informative illustrations If you collect anything at all from the vintage Topps era this book is for you
