On The Theory Of Vector Measures Memoirs Of The American Mathematical Society No 195:

On the Theory of Vector Measures William Howard Graves,1977 Given a ring of subsets of a non empty set there is a universal measure on the ring with values in an associated complete locally convex space which carries through its typology much of the combinatorial and measure theoretic structure of the ring Moreover vector measures of the ring are in 1 1 correspondence with continuous linear maps on the associated space Several aspects of the theory of vector measures including decomposition theorems extension theorems Bartle Dunford Schwartz type theorems on weak compactness and Pettis and Orlicz Pettis type theorems are studied in the unifying context of the universal measure and the associated universal representation theorem A brief account of a similar theory for measures on abstract Boolean algebras is also given
