On The C Algebras Of Foliations In The Plane:

 On the C*-Algebras of Foliations in the Plane Xiaolu Wang,2006-11-15 The main result of this original research monograph is the classification of C algebras of ordinary foliations of the plane in terms of a class of trees It reveals a close connection between some most recent developments in modern analysis and low dimensional topology It introduces noncommutative CW complexes as the global fibred products of C algebras among other things which adds a new aspect to the fast growing field of noncommutative topology and geometry The reader is only required to know basic functional analysis However some knowledge of topology and dynamical systems will be helpful The book addresses graduate students and experts in the area of analysis dynamical systems and topology Foliations II Alberto Candel,Lawrence Conlon,2000 This is the second of two volumes on foliations the first is Volume 23 of this series In this volume three specialized topics are treated analysis on foliated spaces characteristic classes of foliations and foliated three manifolds Each of these topics represents deep interaction between foliation theory and another highly developed area of mathematics In each case the goal is to provide students and other interested people with a substantial introduction to the topic leading to further study using the extensive available literature **Index Theory of Elliptic Operators, Foliations, and Operator Algebras** Jerome Kaminker,Kenneth C. Millett,American Mathematical Society,1988 Combining analysis geometry and topology this volume provides an introduction to current ideas involving the application of K theory of operator algebras to index theory and geometry In particular the articles follow two main themes the use of operator algebras to reflect properties of geometric objects and the application of index theory in settings where the relevant elliptic operators are invertible modulo a C algebra other than that of the compact operators The papers in this collection are the proceedings of the special sessions held at two AMS meetings the Annual meeting in New Orleans in January 1986 and the Central Section meeting in April 1986 Jonathan Rosenberg s exposition supplies the best available introduction to Kasparov s KK theory and its applications to representation theory and geometry A striking application of these ideas is found in Thierry Fack s paper which provides a complete and detailed proof of the Novikov Conjecture for fundamental groups of manifolds of non positive curvature Some of the papers involve Connes foliation algebra and its K theory while others examine C algebras associated to groups and group actions on spaces **On the C*-algebras of a Family of Solvable Lie Groups and Foliations** Xiaolu Wang,1986 **Canadian Journal of Mathematics** ,1990-08 *Canadian Journal of Mathematics* ,1990-08 **Flows on 2-dimensional Manifolds** Igor Nikolaev,Evgeny Zhuzhoma,2006-11-14 Time evolution in low dimensional topological spaces is a subject of puzzling vitality This book is a state of the art account covering classical and new results The volume comprises Poincar Bendixson local and Morse Smale theories as well as a carefully written chapter on the invariants of surface flows Of particular interest are chapters on the Anosov Weil problem C algebras and non compact surfaces The book invites graduate students and non specialists to a fascinating realm of research It is a valuable source of reference to the specialists *Canadian Journal of*

Anile,Yvonne Choquet-Bruhat,2006-11-14 In recent years the subject of relativistic fluid dynamics has found substantial applications in astrophysics and cosmology theories of gravitational collapse models of neutron stars galaxy formation as well as in plasma physics relativistic fluids have been considered as models for relativistic particle beams and nuclear physics relativistic fluids are currently used in the analysis of the heavy ion reactions Modern methods of analysis and differential geometry have now also been introduced The International C I M E Course brought together expertise and interest from several areas astrophysics plasma physics nuclear physics mathematical methods to create an appropriate arena for discussion and exchange of ideas The main lecture courses introduced the most significant aspects of the subject and were delivered by leading specialists The notes of these have been written up for this volume and constitute an up to date and thorough treatment of these topics Several contributions from the seminars on specialized topics of complementary interest to the courses are also included   *Number-Theoretic Analysis* Edmund Hlawka,Robert F.
