Verma, 1995-08-29 General Description of the Volume Oncogenes have become a central focus of cancer research All involved in this discipline will find this volume an invaluable aid in developing protocols needed for their research General Description of the Series The critically acclaimed laboratory standard for more than forty years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike Now with more than 300 volumes all of them still in print the series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences Cell culture Molecular cloning Gene function Protein protein interactions Protein DNA interactions **Oncogenes** Kathy B. Burck, Edison T. Liu, James W. Larrick, 2012-12-06 Cancer viruses have played a paradoxical role in the history of cancer research Discovered in 1911 by Peyton Rous 1 at the Rockefeller Institute they were largely ignored for several decades Witness his eventual recognition for a Nobel Prize but not until 1966 setting an all time record for latency and testimony to one more advantage of longevity In the 1950s another Rockefeller Nobelist Wendell Stanley spearheaded a campaign to focus attention on viruses as etiological agents in cancer his platform having been the chemical characterization of the tobacco mosaic virus as a pure protein correction ribonucleoprotein in 1935 2 This doctrine was a centerpiece of the U S National Cancer Crusade of 1971 if human cancers were caused by viruses the central task was to isolate them and prepare vaccines for immunization At that point many observers felt that perhaps too much attention was being devoted to cancer viruses It was problematic whether viruses played an etiological role in more than a handful of human cancers *Oncogene Techniques* P. Oncogene-Directed Therapies Janusz W. Rak, 2002-12-03 Prominent investigators and clinicians summarize in a balanced blend of fundamental science basic research experimental therapeutics and early clinical experiences what is known about oncogenes and oncogenesis and describe how that knowledge can be used to treat the cancer The contributors explain how why and under what conditions certain proteins acquire the ability to transform eukaryotic cells and detail the crucial biological consequences of this oncogenic transformation particularly for cellular mitogenesis survival differentiation migration proteolysis or angiogenic competence Their articles thoroughly explicate the premises principles techniques and approaches to oncogene targeting in various types of human cancer by using signal transduction inhibitors immunological targeting methods and antisense gene therapy **The Status and Implications of Oncogene Research** United States. Congress. House. Committee on Science and Technology. Subcommittee on Investigations and Oversight, 1984 **Guide to Techniques in Mouse Development, Part B** Paul Wassarman, Philippe M. Soriano, 2010-09-24 This volume comprehensively covers new technologies and methodologies that have appeared for the study of mouse development Update of volume 225 Guide to Techniques in Mouse Development edited by P M Wassarman and M L DePamphilis and published in

1993 Comprehensively covers new techniques for the cryopreservation of gametes and embryos production of transgenic and null knockout animals use of ES cells generation of conditional inducible mutant animals use of gene trap mutagenesis analysis of allele specific expression use of new reporter constructs humanizing of transgenic animals transcript profiling of mouse development imaging of mouse development rederivation of animals and use of mouse genomics Guide to Techniques in Mouse Development, Part A ,2010-08-04 Guide to Techniques in Mouse Development Part A comprehensively covers new technologies and methodologies that have appeared for the study of mouse development Update of volume 225 of Methods in Enzymology Guide to Techniques in Mouse Development edited by P M Wassarman and M L DePamphilis and published in 1993 Covers new technologies and methodologies including new techniques for the cryopreservation of gametes and embryos production of transgenic and null knockout animals use of ES cells generation of conditional inducible mutant animals use of gene trap mutagenesis analysis of allele specific expresion use of new reporter constructs humanizing of transgenic animals transcript profiling of mouse development imaging of mouse development rederivation of animals and use of mouse genomics *Oncogene and Transgenics Correlates of Cancer Risk Assessments* Constantine Zervos,2012-12-06 The data the information and even the overarching knowledge necessary for risk assessments of economically important environmental carcinogens come for the most part from the applied biological disciplines e g toxicology epidemiology biostatistics etc The more fundamental biological disciplines e g biochemistry cell biology molecular biology molecular genetics of cancer etc have enormous but unrealized potential to improve current cancer risk assessment methods The objective of this advanced research workshop ARW was to advance the state of the art of cancer risk assessment methods by identifying potential short and long term contributions to such methods from the more fundamental disciplines Attention was paid to short and long term contributions from research advances in the biochemistry and physiology of oncogenes oncogenes research and in the construction and utilization of transgenic animals transgenics research In the last 20 years researchers in the fundamental biological disciplines i e biochemists geneticists molecular and cell biologists etc have inter alia advanced spectacularly our understanding of the nature of neoplastic diseases Their phenomenal progress is the combined result of both advances and refinements of the techniques available to them and of new fundamental discoveries Among the latter the most significant are the discoveries of oncogenes and of the feasibility of creating transgenic animals i e of transferring well defined and expressible genes from the cells of one species of organisms to the embryonic cells of another **Oncogene Proteins** Peter B. Murphy,2008 Oncogene proteins are proteins coded by oncogenes They include proteins resulting from the fusion of an oncogene and another gene This new book presents the latest research in the field from around the world Oncogenes and Retroviruses Peter K. Vogt,2012-12-06 The newest volume in the Current Topics in Microbiology and Immunology series edited by Dr Vogt and dealing with oncogenes and retroviruses contains four review articles by international authorities in the field These articles presenting the latest research results continue the tradition of

excellence for which the series is so well known

MicroRNA Methods John J. Rossi, 2007-08-30 MicroRNAs miRNA are tiny bits of genetic material that were unknown nearly 10 years ago but now represent an exciting field of study in biology Upon their discovery researchers revealed for the first time a new mechanism by which microRNA can stop the function of messenger RNA mRNA by literally cutting it in half interfering with the normal function of specific messenger RNAs in gene expression This expression of genes that code for essential proteins is essentially what controls whether a cell turns into a liver lung or brain cell for example Understanding what activates this process or stops it is a key to understanding the biological process and builds a foundation for advances in medicine and other fields This volume in Methods in Enzymology presents valuable methods for studying MicroRNA with three sections covering identification of MicroRNAs and their targets MicroRNA expression maturation and functional analysis and MicroRNAs and disease

Methods in Methane Metabolism, Part A Amy Rosenzweig, Stephen W. Ragsdale, 2011-05-11 Produced by microbes on a large scale methane is an important alternative fuel as well as a potent greenhouse gas This volume focuses on microbial methane metabolism which is central to the global carbon cycle Both methanotrophy and methanogenesis are covered in detail Topics include isolation and classification of microorganisms metagenomics approaches biochemistry of key metabolic enzymes gene regulation and genetic systems and field measurements The state of the art techniques described here will both guide researchers in specific pursuits and educate the wider scientific community about this exciting and rapidly developing field Topics include isolation and classification of microorganisms metagenomics approaches biochemistry of key metabolic enzymes gene regulation and genetic systems and field measurements The state of the art techniques described here will both guide researchers in specific pursuits and educate the wider scientific community about this exciting and rapidly developing field

Oncogenes C.C. Benz, E.T. Liu, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology text books are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish

good in depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes that aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date and easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion first by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc and second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more
