Moran, 2015-09-16 The policy of the United States and by extension that of many oil importing countries toward OPEC countries is in large part a function of an estimate of the factors that condition oil decisions in exporting countries In this title originally published in 1978 Ted Moran examines how immune OPEC can expect to be to the struggles over market shares that traditionally have beset attempts to organize natural resource cartels Moran's research leads him to argue that skyrocketing commitments to growth and social betterment leave little slack in national budgets and thus preclude output reductions for any extended period or at least act as a substantial deterrent unless such reductions come in support of an effort to raise real oil prices substantially For any student interested in international policy making economic development or environmental studies this title offers fascinating

Milling, Erich O.K. Zahn, 2012-12-06 Especially during the last decade the systems approach gained wide spread attention and increased influence in the world of academics and business The holistic view of how individual elements interact with each other to form an entity not a collection of isolated parts becomes more and more important Whether it is called integration as in Computer Integrated Manufacturing organism in ecological studies or network like the communication network it is the system's idea which opens new dimensions for insights applications and development System Dynamics or Industrial Dynamics as it was called during its early years by its founder and mentor M I T's now Professor Emeritus Jay W Forrester pioneered the use of system concepts and computer simulation for the analysis of complex problems in business and management It was applied to study the dynamics of corporations cities national economies and finally the global problems of man and in his limited and fragile environment The field has reached a stage of self sustained development and momentum A few years ago the System Dynamics Society was founded a high quality academic journal is now published in its fifth volume and the annual International Conferences of the Society were institutionalized and took place in America Europe and Asia The organization of international meetings for this scientific community however is older than the System Dynamics Society itself The first conventions were held as special sections of conferences devoted to simulation or cybernetics Producing Liquid Fuels from Coal James T. Bartis, Frank A. Camm, David Santana Ortiz, 2008 Record high world oil prices have prompted renewed interest in producing liquid fuels from coal The United States leads the world in recoverable coal reserves Moreover the technology for converting coal to liquid fuels already exists and production costs appear competitive at world oil prices well below current levels Yet despite its promise private investment in coal to liquids CTL technology is being impeded by three uncertainties where oil prices are heading what it actually costs to produce coal derived fuels and how greenhouse gas emissions will be regulated A domestic CTL industry could produce as much as three million barrels per day of transportation fuels by 2030 Having such an industry would yield important energy security benefits most notably a lowering of world oil prices and a decrease in wealth transfers from oil users to oil producers But establishing a large CTL industry also raises important policy and environmental issues associated with climate change coal mining and water consumption Weighing both benefits and costs it makes sense for the United States to pursue an insurance or hedge strategy that promotes the early construction and operation of a limited number of
