Energy Shocks and the World Economy Hui Liang Tsai,1989-09-25 The second of two works resulting from the author s extensive study of energy and the world economy this book examines the international macroeconomic aspects of energy adjustment Specifically the author analyzes the ways in which economies adjust to external shocks particularly the oil price shock and other energy market changes of the 1970s and early 1980s He seeks to put the recessions experienced by industrial countries during the last decade in historical and analytical perspective arguing that with the increasing openness of the world economy the effects of the domestic policies of the industrial economies are increasingly relevant to the economic prospects of developing countries He argues further that the apparent problems of the global economy during the post 1973 era stagnant growth inflation the international debt crisis and rising protectionism are in part the result of a deterioration in the economic performance of industrial countries The author begins by examining the effects of energy supply disturbances on the world economy Subsequent chapters explore such issues as challenges to economic stabilization policy the impact of external shocks on the economies of less developed countries especially with regard to inflation and balance of payments problems the relationship between world payment imbalances and recycling problems and the link between energy markets and the international debt crisis Finally the author provides a theoretical framework for the international adjustment to energy shocks focusing on flexible exchange rate policy responses to exogenous shocks in the 1970s and the contribution of exchange rate misalignment to the international debt crisis of the 1980s *Energy Abstracts for Policy Analysis* ,1985-07 **Routledge Library Editions: Energy** Various,2021-07-09 Reissuing works originally

published between 1964 and 1994 this set of ten volumes is an excellent collection of works on energy production and

Spiro,2019-06-30 Between 1973 and 1980 the cost of crude oil rose suddenly and dramatically precipitating convulsions in international politics Conventional wisdom holds that international capital markets adjusted automatically and remarkably well enormous amounts of money flowed into oil rich states and efficient markets then placed that new money in cash poor Third World economies David Spiro has followed the money trail and the story he tells contradicts the accepted beliefs Most of the sudden flush of new oil wealth didn't go to poor oil importing countries around the globe Instead the United States made a deal with Saudi Arabia to sell it U S securities in secret a deal resulting in a substantial portion of Saudi assets being held by the U S government With this arrangement the U S government violated its agreements with allies in the developed world Spiro argues that American policymakers took this action to prop up otherwise intolerable levels of U S public debt In effect recycled OPEC wealth subsidized the debt happy policies of the U S government as well as the debt happy consumption of its citizenry
