DEFINITION

The term **LASER** is an abbreviation which stands for **L**ight **A**mplification by **S**timulated **E**mission of **R**adiation. The laser is a source of coherent, directional, monochromatic light that can be precisely focused into a small spot. The laser is a very useful tool for a wide variety of clinical diagnostic and therapeutic procedures.

COMMON OPHTHALMIC LASER PROCEDURES

PATTERN SCANNING LASER PHOTOCOAGULATION

The first attempts to make photocoagulation a completely automated procedure involved rather complex equipment, including image recognition software and eye tracking[13]. The complexity of such systems prevented their commercial introduction and acceptance in clinical practice.

A semi-automatic pattern scanning photocoagulator (PASCAL, Topcon Medical Laser Systems Inc.) was introduced by OptMedica Corp. in 2005[14]. It delivered patterns of laser spots ranging from a single spot to 56 spots applied in a rapid sequence with a single depression of a foot pedal. The control of laser parameters was performed by means of a touch screen graphic user interface, facilitating selection of the different patterns of photocoagulation. The laser was activated by pressing a foot pedal, which was kept depressed until the entire pattern was completed, although it was possible for the physician to release the foot pedal and stop the laser at will, prior to completion of the pattern, if clinically indicated.

Patterns included square arrays with up to 5x5 spots, arcs with the number of concentric rows varying from 1 to 3, circular patterns for photocoagulation of small holes and other lesions in the retinal periphery. Patterns for macular photocoagulation included rings and arcs with adjustable central exclusion zone of up to 2 mm in diameter to allow for laser application reducing the risk of inadvertent damage to the foveal avascular zone.

images with bullet points and reference text boxes making the content user friendly and easy to understand The Ophthalmic Laser Handbook Nathan Lighthizer,2021 As clinicians we are healers and scientists As scientists in this modern era we are wedded to technology One of these ophthalmic technologies that encompasses our practices is lasers Ophthalmic lasers have an expansive and multi functional role in ophthalmology and optometry They can now be applied to almost every crucial ocular structure in an elegant and efficacious manner At the same time this diversification of ophthalmic lasers may make it difficult for practitioners and especially those in training to have ready access to all the technical knowledge regarding their practical clinical applications This is why the idea of gathering such essential laser information for the practicing clinician was conceived Although there have been previous references published regarding one or another specific laser technique a more comprehensive source that covers all the fundamental ocular lasers with current clinical relevance has been lacking We hope The Ophthalmic Laser Handbook will fill this void The Ophthalmic Laser Handbook has been designed to provide concise relevant clinical laser information arranged in a consistent easy to use format Most of the chapters contain specific key indications contraindications pre operative considerations and procedural points Post operative considerations are also thoroughly addressed This part of the chapter should be of considerable value to those who are co managing these laser patients One of the most distinctive assets of this laser handbook are its contributors and section editors All have significant clinical experience in either performing the laser procedures or co managing laser patients Laser treatment involves a dynamic process This is why The Ophthalmic Laser Handbook is both a soft cover text and companion eBook The eBook contains all of the material found in the soft cover text with an extensive collection of laser surgical videos As a bonus we have included several non laser chapters including corneal cross linking and intense pulsed light therapy Although these techniques rely on devices that are not lasers by definition electromagnetic radiation is used to therapeutically manipulate tissue and these topics seamlessly fit with the overall scheme of our book **Retina Lasers in Ophthalmology** Andrzej Grzybowski,Jeffrey K. Luttrull,Igor Kozak,2023-05-26 This book discusses the new era of modern retinal laser therapy and its clinical applications While the photocoagulation era universally presupposed the therapeutic necessity of laser induced retinal damage the modern retinal laser therapy is equally opposed to this idea The evidence for this sea change in the understanding of retinal laser is well presented within this book and the conceptual and clinical consequences are discussed with particular emphasis on the emergence of retinal laser therapy as the first reasonable preventive and restorative intervention for the most important retinal disorders Finally the future of modern retinal laser therapy is highlighted with respect to coming technological advances remaining challenges and the place of retinal laser in the management of retinal disease This book is an essential resource for all ophthalmic residents and clinicians seeking a clear and concise guide to modern retinal laser therapy in their everyday practice *Current Techniques in Ophthalmic Laser Surgery* William Edmunds Benson,Gabriel J.
