Species Concepts in Biology Frank E. Zachos, 2016-10-05 Frank E Zachos offers a comprehensive review of one of today's most important and contentious issues in biology the species problem After setting the stage with key background information on the topic the book provides a brief history of species concepts from antiquity to the Modern Synthesis followed by a discussion of the ontological status of species with a focus on the individuality thesis and potential means of reconciling it with other philosophical approaches More than 30 different species concepts found in the literature are presented in an annotated list and the most important ones including the Biological Genetic Evolutionary and different versions of the Phylogenetic Species Concept are discussed in more detail Specific questions addressed include the problem of asexual and prokaryotic species intraspecific categories like subspecies and Evolutionarily Significant Units and a potential solution to the species problem based on a hierarchical approach that distinguishes between ontological and operational species concepts A full chapter is dedicated to the challenge of delimiting species by means of a discrete taxonomy in a continuous world of inherently fuzzy boundaries Further the book outlines the practical ramifications for ecology and evolutionary biology of how we define the species category highlighting the danger of an apples and oranges problem if what we subsume under the same name species is in actuality a variety of different entities A succinct summary chapter glossary and annotated list of references round out the coverage making the book essential reading for all biologists looking for an accessible introduction to the historical philosophical and practical dimensions of the species problem

Time's Anvil Richard Morris, 2012-11-22 A personal and lyrical rediscovery of the history of England through archaeology and the imagination History thrives on stories TIME'S ANVIL explores archaeology's influence on what such stories say how they are told who tells them and how we listen In a dazzlingly wide ranging exploration Richard Morris casts fresh light on three quarters of a million years of history in the place we now think of as England Drawing upon genres that are usually pursued in isolation like biography poetry or physics he finds potent links between things we might imagine to be unrelated His subjects range from humanity's roots to the destruction of the wildwood from the first farmers to industrialization and from Tudor drama to 20th century conflict Each topic sits at a different point along the continuum between epoch and the fleeting moment In part this is a history of archaeology in part too it is a personal account of the author's history in archaeology But mainly it is about how the past is read and about what we bring to the reading as well as what we find The result is a book that defies categorisation but one which will by turns surprise enthrall and provoke anyone who cares for England who we are and where we have come from TIME'S ANVIL was longlisted for the Samuel Johnson Prize

for Non Fiction 2013 **Psychology Library Editions: Comparative Psychology** Various Authors,2022-07-30 Psychology Library Editions Comparative Psychology 16 Volume set brings together a number of titles which explore animal behaviour and learning some in isolation but mostly comparing it with human behaviour Research in this area looks at many different issues using various methods and examines species from insects to primates The series of previously out of print titles originally published between 1928 and 1997 with the majority from the 1970s and 1980s includes contributions from many highly respected authors **Organism and Environment** Sonia E. Sultan,2015-09-10 Over the past decade advances in both molecular developmental biology and evolutionary ecology have made possible a new understanding of organisms as dynamic systems interacting with their environments This innovative book synthesizes a wealth of recent research findings to examine how environments influence phenotypic expression in individual organisms ecological development or eco devo and how organisms in turn alter their environments niche construction A key argument explored throughout the book is that ecological interactions as well as natural selection are shaped by these dual organism environment effects This synthesis is particularly timely as biologists seek a unified contemporary framework in which to investigate the developmental outcomes ecological success and evolutionary prospects of organisms in rapidly changing environments Organism and Environment is an advanced text suitable for graduate level students taking seminar courses in ecology evolution and developmental biology as well as academics and researchers in these fields *Darwinism, Democracy, and Race* John Jackson,David Depew,2017-07-06 Darwinism Democracy and Race examines the development and defence of an argument that arose at the boundary between anthropology and evolutionary biology in twentieth century America In its fully articulated form this argument simultaneously discredited scientific racism and defended free human agency in Darwinian terms The volume is timely because it gives readers a key to assessing contemporary debates about the biology of race By working across disciplinary lines the book s focal figures the anthropologist Franz Boas the cultural anthropologist Alfred Kroeber the geneticist Theodosius Dobzhansky and the physical anthropologist Sherwood Washburn found increasingly persuasive ways of cutting between genetic determinist and social constructionist views of race by grounding Boas s racially egalitarian culturally relativistic and democratically pluralistic ethic in a distinctive version of the genetic theory of natural selection Collaborators in making and defending this argument included Ashley Montagu Stephen Jay Gould and Richard Lewontin Darwinism Democracy and Race will appeal to advanced undergraduates graduate students and academics interested in subjects including Philosophy Critical Race Theory Sociology of Race History of Biology and Anthropology and Rhetoric of Science Integrative Organismal Biology Lynn B. Martin,Cameron K. Ghalambor,H. Arthur Woods,2015-02-16 Integrative Organismal Biology synthesizes current understandings of the causes and consequences of individual variation at the physiological behavioral and organismal levels Emphasizing key topics such as phenotypic plasticity and flexibility and summarizing emerging areas such as ecological immunology oxidative stress biology and others Integrative Organismal

Biology pulls together information from diverse disciplines to provide a synthetic view of the role of the individual in evolution Beginning with the role of the individual in evolutionary and ecological processes the book covers theory and mechanism from both classic and modern perspectives Chapters explore concepts such as phenotypic plasticity genetic and epigenetic variation physiological and phenotypic variation homeostasis and gene and physiological regulatory networks A concluding section interweaves these concepts through a series of case studies of life processes such as aging reproduction and immune defense Written and edited by leaders in the field Integrative Organismal Biology will be an important advanced textbook for students and researchers across a variety of subdisciplines of integrative biology **Forest Diversity** Stephen
