 Christopher Gold,2018-04-17 Many disciplines are concerned with manipulating geometric or spatial objects in the computer such as geology cartography computer aided design CAD etc and each of these have developed their own data structures and techniques often independently Nevertheless in many cases the object types and the spatial queries are similar and this book attempts to find a common theme **Contemporary Architecture and the Digital Design Process** Peter Szalapaj,2014-04-23 Contemporary Architecture and the Digital Design Process introduces the reader to new developments in the computer modelling of design form in contemporary architectural practice through a series of detailed case studies The book illustrates how evolving design practices use and exploit the potential of new computing technologies in a wide range of areas and application A central thesis of this book is that technology follows design demand rather than design adjusting to available new technology Designers are not merely passive recipients of prescribed computing tools and techniques Instead they are increasingly able to express their intuitive design ideas through the rational medium of computing The book features several contemporary building projects each of which introduces a range of CAD and computing issues based upon the work of creative architectural and engineering design practices These include the offices of Frank O Gehry Peter Cook and Colin Fournier Anthony Hunt Associates Peter Hubner Szyskowitz Kowalski and Faulkner Brown All these examples show what architects need to know and the skills they need to acquire to use advanced CAD technology *HCI International 2014 - Posters' Extended Abstracts* Constantine Stephanidis,2014-05-19 This is the first of a two volume set CCIS 434 and CCIS 435 that constitutes the extended abstracts of the posters presented during the 16th International Conference on Human Computer Interaction HCII 2014 held in Heraklion Crete Greece in June 2014 and consisting of 14 thematic conferences The total of 1476 papers and 220 posters presented at the HCII 2014 conferences were carefully reviewed and selected from 4766 submissions These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems The papers accepted for presentation thoroughly cover the entire field of Human Computer Interaction addressing major advances in knowledge and effective use of computers in a variety of application areas The extended abstracts were carefully reviewed and selected for inclusion in this two volume set This volume contains posters extended abstracts addressing the following major topics design methods techniques and knowledge the design of everyday things interacting with information and knowledge cognitive perceptual and emotional issues in HCI multimodal and natural interaction algorithms and machine learning methods in HCI virtual and augmented environments **Geometric Modeling and Reasoning of Human-Centered Freeform Products** Charlie C. L. Wang,2012-08-11 The recent trend in user customized product design requires the shape of products to be automatically adjusted according to the human body s shape so that people will feel more comfortable when wearing these products Geometric approaches can be used to design the freeform shape of products worn by people which can greatly improve the

efficiency of design processes in various industries involving customized products e g garment design toy design jewel design shoe design and design of medical devices etc These products are usually composed of very complex geometric shapes represented by free form surfaces and are not driven by a parameter table but a digital human model with free form shapes or part of human bodies e g wrist foot and head models Geometric Modeling and Reasoning of Human Centered Freeform Products introduces the algorithms of human body reconstruction freeform product modeling constraining and reconstructing freeform products and shape optimization for improving the manufacturability of freeform products Based on these techniques the design automation problem for human centered freeform products can be fundamentally solved Researchers and developers working on problems of automatic designing individually customized products can use this book as a reference and it can also be used in courses in computer aided product design at the graduate level
