Principles Of English Stress Cambridge Studies In Linguistics:

Principles of English Stress Luigi Burzio, 1994-12 Luigi Burzio's *Principles of English Stress* challenges many of the assumptions that have underpinned the generative description of English stress and more generally standard metrical theory. Central to Burzio's analysis is a novel typology of metrical constituents that includes ternary feet and excludes monosyllabic feet. The analysis is essentially nonderivational in character: principles of well-formedness check for the presence of stress and weight in the output. The principles themselves are organized into a hierarchy consisting of a hardcore controlling foot form that in cases of conflict may override principles of metrical consistency and alignment of edges. The interplay among these competing principles accounts for the cyclic effects of the standard theory. A special role is accorded phonetically null syllables that analyse hidden metrical structure to preserve a simple foot inventory and sharply curtail the standard theory's extrametricality. *The Phonology of Japanese* Laurence Labrune, 2012-02-16 This account of the phonology of Japanese and its major dialects presents original analyses of every aspect of the Japanese sound system including its segment inventory, prosodic units, mora and syllable, prosody and accent. *The Phonology of Standard Chinese* San Duanmu, 2007-10-18 This comprehensive study of Chinese phonology covers both factual description and theoretical analyses. In addition, efforts have been made to avoid unnecessary jargon and to introduce relevant theories in a non-technical way. *Elements, Government and Licensing* Florian Breit, Yuko Yoshida, Connor Youngberg, 2023-08-14 *Elements, Government and Licensing* brings together new theoretical and empirical developments in phonology. It covers three principal domains of phonological representation: melody and segmental structure, tone, prosody and prosodic structure, and phonological relations, empty categories and vowel zero alternations. Theoretical topics covered include the formalisation of Element Theory, the hotly debated topic of structural recursion in phonology, and the empirical status of government. In addition, a wealth of new analyses and empirical evidence sheds new light on empty categories in phonology, the analysis of certain consonantal sequences, phonological and non-phonological alternation, the elemental composition of segments, and many more. Taking up long-standing empirical and theoretical issues informed by the Government Phonology and Element Theory, this book provides theoretical advances while also bringing to light new empirical evidence and analysis challenging previous generalisations. The insights offered here will be equally exciting for phonologists working on related issues inside and outside the Principles Parameters programme, such as researchers working in Optimality Theory or classical rule-based phonology. **Advances in English Historical Linguistics** Jacek Fisiak, Marcin Krygier, 2011-04-20 *TRENDS IN LINGUISTICS* is a series of books that open new perspectives in our understanding of language. In the 1990 s the focus of phonological studies has changed from rule based analysis to constraint based analysis The study of Chinese phonology has also undergone such a change as have other area studies in Generative Phonology Why and how this change has occurred the difference between the two kinds of analyses and what has really happened in phonology after the change are the primary concerns of linguists and anyone interested in the study of Generative Phonology or other area studies in Generative Linguistics To answer these questions one must review the developing process of the change compare the two kinds of analyses in terms of their different frameworks and research focuses and profile the studies in phonology in any area studies in recent years Chinese Phonology in Generative Grammar is intended to offer such a review and comparison while outlining

the studies in Chinese phonology Eight unpublished papers written by seven authors are selected to cover the areas of field work dialectology and synchronic studies of segmental and tonal systems of the Chinese language family These papers are directly related to the theoretical issues in the SPE Model Lexical Phonology and Morphology Autosegmental Phonology Metrical Phonology and Optimality Theory By putting the study of Chinese phonology into the generative perspective this collection provides useful data for further theoretical work and draw significant feedback to the theory of Generative Phonology It reviews the theoretical development from rule based analysis to constraint based analysis in the study of Generative Phonology over the last three decades It compares the two kinds of analyses with respect to their different frameworks and research focuses and their relations with each other in Generative Phonology It profiles the study of Chinese phonology in recent years by putting it into the generative perspective
