Principles Of Lithogenesis Volume 3:

Quaternary and Recent Processes and Forms (1890-1965) and the Mid-century Revolutions Richard J. Chorley, 2008
Lacustrine Facies Analysis P. Anadon, L. L. Cabrera, K. Kelts, 2009-04-03 This book considers the deposition of sediments in different types of lakes and shows how changes in the lake environment can be interpreted from the sediment facies at the lake floor. Lakes are particularly sensitive to climate change and thus their sediments are accurate indicators of environmental change and palaeoclimate. This volume examines both ancient and modern lake deposits which is particularly appropriate considering the current widespread interest in global climate change with particular emphasis on global warming. The book is global in approach and contains fifteen papers from an internationally acclaimed authorship. The volume will be of particular interest to sedimentologists, petroleum geologists, economic geologists and geographers with a particular interest in global climate change.

Calcretes V. Paul Wright, Maurice E. Tucker, 2009-04-15 Calcretes are an important component of many ancient fluvial lacustrine and shallow marine carbonate sequences and they are widely developed in many parts of the world at the present time. Calcretes are useful to the earth scientist involved in reconstructing ancient environments, palaeoclimates and palaeogeographics and they may also reveal details of soil biota and chemistry. Over the last two decades the journal *Sedimentology* has published a number of articles on this subject and a compilation of them is presented here. In addition to the five main sections this volume also includes an introduction to the subject that offers a review of recent work on calcretes. The collection of papers illustrates the range of calcrete occurrences and the great variety of textures and fabrics. This volume is authored and edited by experts and will serve as more than an introduction to the subject for geologists, soil scientists and geographers. If you are a member of the International Association of Sedimentologists for purchasing details please see <http://www.iasnet.org/publications/details.asp?code=RP2>
Collected Works of Richard J. Chorley Richard J. Chorley, 2019-07-10 Richard John Chorley was known as a leading figure in quantitative geography in the late 20th Century and played an instrumental role in bringing the use of systems theory to geography. This set of 7 reissued works either edited by or written by Chorley offers a great wealth of scholarship on geography and geomorphology.
Salt in the Earth Sciences Webster Mohriak, 2025-08-06 A comprehensive review of salt deposition in sedimentary environments worldwide. Salt is formed when water rich in evaporite minerals accumulates on the Earth's surface and then evaporates. Over time pressure and tectonics change the structure and shape of salt layers. Recent technological advances have improved the interpretation and modeling of subsurface salt structures. *Salt in the Earth Sciences: Evaporite Rocks and Salt Deposition* presents a global overview of salt deposition and deformation in sedimentary basins synthesizing data, analysis, observations, theories and modeling. Volume highlights include: Overview of salt use by humans from prehistoric times to the modern industrial world; Chemical and physical principles of

evaporite deposition in sedimentary basins Effects of gravity and tectonic forces on rock salt deformation Development of salt structures in orogenic belts and deep basins Seismic interpretation methods for identification of subsurface salt structures Key sedimentological models for evaporite deposition in continental and marine environments Global examples ranging from modern hypersaline rift lakes to ancient marine salt basins Browse the other volume in this set Salt in the Earth Sciences Basin Analysis and Salt Tectonics The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals

Geomorphology Richard J. Chorley,Stanley A. Schumm,David E. Sugden,2019-04-10 Originally published in 1984 This major text covers the whole discipline of geomorphology presenting a clear and comprehensive overview of the field drawing on the full range of modern research Landforms and their formative processes are treated on a broad spectrum of spatial scales and examples are drawn from the major geological climatic and biotic environments The book is divided conveniently into some 170 clearly defined sections to allow readers to make the most efficient use of those parts of the text relevant to their particular needs After introducing the basic concepts such as systems analysis morphologic and cascading systems the historical evolutionary approach and process response geomorphology the book moves on to the geological background to geomorphology and then the extensive third part deals with the geomorphic processes and responding landforms Part four examines climatic geomorphology and the appendix touches on applied geomorphology especially fluvial processes

The Scientific Study of Flint and Chert G. de G. Sieveking,M. B. Hart,2011-07-14 The thirty papers in this 1986 volume review the scientific knowledge of the nature of flint and chert at this time These papers were presented at a 1983 interdisciplinary and international conference on flint and other cherts Each contribution has been meticulously assessed and edited prior to

publication This collection is principally concerned with the geology and geochemistry of flint in European chert Topics include the origin of flint scanning electron microscopy of surface textures and the behaviour of flint under periglacial conditions There is a companion volume edited by G de G Sieveking and M B Hart on the archaeological uses of flint
