Division of Vocational and Technical Education,1964 Applications of Mass Spectrometry for the Provision of Forensic Intelligence Simona Francese,Stephen Bleay,2023-12-20 Mass spectrometry is one of the most versatile analytical techniques due to the vast range of analytes that it can detect and quantify and as such for its contribution to a significant number of life science fields The legal and forensics community has certainly benefited from this technique which has been able to provide reliable evidence in court cases Liquid Chromatography Gas Chromatography Mass Spectrometry LC GC MS still have a dominant role in the provision of forensic intelligence However in the past decade new and exciting MS based techniques have emerged and are or have evolved to be at an operational deployment maturity enabling either fast ambient non destructive or portable screening or encompass all of these features In this book developments of LC MS and GC MS based techniques are covered with respect to operational practice and new applications accompanied by other MS based techniques that are increasing forensic opportunities and that operate on a variety of evidence types Whilst the underpinning working principles of each relevant mass spectrometry technique are summarised each chapter primarily focuses on its implementation in criminal investigation and court cases In the last chapters this book additionally covers emerging MS technologies that are at the beginning of their operational implementation journey as well as niche applications outside the

fields of traditional forensic science but with a clear potential to impact future investigations forensics beyond the courtroom This book provides an up to date reference for the mass spectrometry based tools that are currently available both as established and as emerging methods within forensic practice It will help casework commissioning managers and forensic providers worldwide to make more informed decisions as to the forensic strategy and workflow when examining exhibits It is also recommended to postgraduates and early career investigators with reference to the contribution that these techniques and methods could make if applied to classic forensic science practice Catalogs Harold Reeves (Firm),1919
