Technology Assessment, Courts and the Right to Healthcare Daniel Wang, 2021-12-30 Both developing and developed countries face an increasing mismatch between what patients expect to receive from healthcare and what the public healthcare systems can afford to provide Where there has been a growing recognition of the entitlement to receive healthcare the frustrated expectations with regards to the level of provision has led to lawsuits challenging the denial of funding for health treatments by public health systems This book analyses the impact of courts and litigation on the way health systems set priorities and make rationing decisions In particular it focuses on how the judicial protection of the right to healthcare can impact the institutionalization functioning and centrality of Health Technology Assessment HTA for decisions about the funding of treatment Based on the case study of three jurisdictions Brazil Colombia and England it shows that courts can be a key driver for the institutionalization of HTA These case studies show the paradoxes of judicial control which can promote accountability and impair it demand administrative competence and undermine bureaucratic capacities The case studies offer a nuanced and evidence informed understanding of these paradoxes in the context of health care by showing how the judicial control of priority setting decisions in health care can be used to require and control an explicit scheme for health technology assessment but can also limit and circumvent it It will be essential for those researching Medical Law and Healthcare Policy Human Rights Law and Social Rights **Complexity and Healthcare Organization**

The Economics of Resource Allocation in Health Care Andrea Klonschinski,2016-03-31 The question of how to allocate scarce medical resources has become an important public policy issue in recent decades Cost utility analysis is the most commonly used method for determining the allocation of these resources but this book counters the argument that overcoming its inherent imbalances is simply a question of implementing methodological changes The Economics of Resource Allocation in Health Care represents the first comprehensive analysis of equity weighting in health care resource allocation that offers a fundamental critique of its basic framework It offers a critique of health economics putting the discourse on economic evaluation into its broader socio political context Such an approach broadens the debate on fairness in health economics and ties it in with deeper rooted problems in moral philosophy Ultimately this interdisciplinary study calls for the adoption of a fundamentally different paradigm to address the distribution of scarce medical resources This book will be of interest to policy makers health care professionals and post graduate students looking to broaden their understanding of the economics of the health care system

Heinz Redwood,2000 The National Health Service provides poor quality health care compared with systems in other developed countries In this book Heinz Redwood makes detailed comparisons between the UK France Germany and the USA in order to demonstrate just how wide the gap between Britain and the rest of the developed world has become We spend less of our national wealth on health than countries at a similar level of economic development In terms of numbers of doctors and nurses the UK is closer to Mexico and Turkey than it is to France and Germany As a result we find ourselves denied the standard of care which people in other countries take for granted or else we wait so long that some patients die before reaching the head of the queue

The NHS and Contemporary Health Challenges From a Multilevel Perspective Dalingwater, Louise,2020-06-26 The National Health Service or NHS is the United Kingdom s national healthcare system It oversees the public s health and ensures the medical wellbeing of the population of the UK Governance network processes are complex because of the different nature of agendas and strategies of actors involved in health but increasingly because of the link between social and healthcare delivery recent initiatives to provide a joined up or integrated approach have been presented However the extent of joined up governance processes in the National Health Service is rather uneven So far reforms to try to improve the running of the NHS through the introduction of market mechanisms or increased decentralization have only served to exacerbate such tensions and resulted in further fragmentation of the public health system The NHS and Contemporary Health Challenges From a Multilevel Perspective illustrates the complexities of governing public health services that are part of the NHS and takes an innovative approach by examining public health provision through a multiscalar lens which reveals significant limits of the current governance model The book raises the various challenges that clinical staff public authorities and the general public face in the provision of healthcare to uphold core values inherent in health systems While highlighting topics including health governance patient satisfaction and public health this book is ideally designed for policymakers government officials healthcare administrators hospital managers healthcare researchers medical professionals and students
